Introduction to Community Health Assessments

HERNANDO COUNTY COMMUNITY HEALTH ASSESSMENT PROCESS

The Hernando County Community Health Assessment process launched in February of 2019, continuing a long history and strong commitment to better understanding the health status and health needs of the community. The purpose of the community health assessment is to uncover or substantiate the health needs and health issues in Hernando County and better understand the causes and contributing factors to health and quality of life in the county. The Florida Department of Health in Hernando County has historically played the lead role in the development of the community health assessments. As a Public Health Accreditation Board accredited health department, the Florida Department of Health in Hernando County further demonstrates its commitment to ongoing community engagement to address health issues and mobilize resources towards improving health outcomes through this comprehensive process.

Enhancements to the 2019 community health assessment process include an emphasis on health equity with concerted efforts to involve, include and understand diverse perspectives, examination of pertinent local data on health behaviors and outcomes, healthcare seeking practices, vulnerable populations, and environmental concerns along with direct involvement of key community partners and residents. The Hernando County Community Health Assessment Steering Committee members (Steering Committee) were recruited by the Health Officer of the Florida Department of Health in Hernando County. The Steering Committee participated in all elements of the community health assessment including the identification of community partner agencies and members for inclusion in the assessment process to assure equitable representation of groups and individuals from Hernando County. A list of Steering Committee members is included in the Appendix.

The Florida Department of Health in Hernando County engaged the services of WellFlorida Council to complete the assessment. WellFlorida Council is the statutorily designated (F.S. 408.033) local health council that serves Hernando County along with 15 other north central Florida counties. The mission of WellFlorida Council is to forge partnerships in planning, research and service that build healthier communities. WellFlorida achieves this mission by providing communities the insights, tools and services necessary to identify their most pressing issues (e.g. community health assessments and community health improvement plans) and to design and implement approaches to overcoming those issues.

The comprehensive health assessment effort is based on a nationally recognized model and best practice for completing community health assessments and improvement plans called Mobilizing for Action through Planning and Partnerships (MAPP). The MAPP tool was developed by the National Association of County and City Health Officials (NACCHO) in cooperation with the Public Health Practice Program Office of the Centers for Disease Control and Prevention (CDC). NACCHO and the CDC's vision for implementing MAPP is "Communities achieving improved health and quality of life by mobilizing partnerships and taking strategic action." Strategies to assure inclusion of the assessment of health equity and health disparities have been included in the Hernando County MAPP process. Use of the MAPP tools and process helped Hernando County assure that a collaborative and participatory process with a focus on wellness, quality of life and

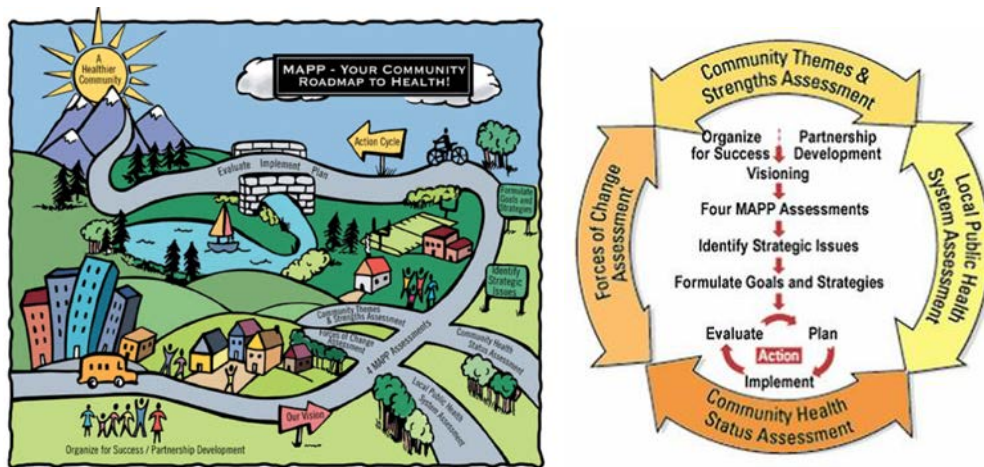

health equity would lead to the identification of shared, actionable strategic health priorities for the community.

At the heart of the MAPP process are the following core MAPP assessments:

- Community Health Status Assessment
- Community Themes and Strengths Assessment
- Forces of Change Assessment
- Local Public Health System Assessment (LPHSA)

These four MAPP assessments work in concert to reveal common themes and considerations in order to hone in on the key community health needs. The findings from MAPP assessments are integrated into the 2019 Hernando County Community Health Assessment.

FIGURE 1: MOBILIZING FOR ACTION THROUGH PLANNING AND PARTNERSHIPS (MAPP).

Source: National Association of County and City Health Officials (N.D.). *Community Health Assessment and Improvement Planning*. Retrieved August 8, 2019, <https://www.naccho.org/programs/public-health-infrastructure/performance-improvement/community-health-assessment>

The Hernando County Community Health Assessment Steering Committee took several actions to organize the 2019 MAPP process. At their kick-off meeting on February 19, the Steering Committee reviewed and approved the MAPP process timeline, inventoried a current list of community partner agencies and stakeholders to identify unrepresented or underrepresented groups or populations in the community health assessment process, and participated in a visioning exercise. Through a facilitated process, Steering Committee members brainstormed several questions: 1) what characteristics, factors and attributes are needed for a healthy Hernando County?, 2) what does having a healthy community mean?, and 3) what are the policies, environments, actions and behaviors needed to support a healthy community? Table 1 below lists the factors and attributes that Hernando County partners felt are the key determinants of health,

healthy outcomes and a health community. The discussion resulted in the formulation of the vision statement: *Hernando County—Where Your Health Matters.*

TABLE 1: VISIONING RESULTS, FACTORS AND ATTRIBUTES OF A HEALTHY COMMUNITY, HERNANDO COUNTY, 2019.

Social Determinants of Health-related Factors and Attributes	Behavior and Environment-related Factors and Attributes
Economic development	Low rates of substance abuse (drugs, alcohol, tobacco)
Rising employment rates	Early prenatal care
Strong schools	Social and recreational opportunities
Access to education (technical schools, college, vocational education)	Outdoor activities in safe settings
Affordable housing	Faith-based communities and activities
Accessible, affordable, nutritious foods	Knowledge within and by community members about existing services and resources
Accessible, affordable healthcare services	Elected officials committed to “Health in All Policies”
Accessible, affordable mental health services	“Sunshine Law” applied appropriately to benefit all
Safe neighborhoods with low crime	Widely used health education including Public Service Announcements (PSAs)
Transportation	Well-trained first responders
Clean air and water	Sufficient numbers of healthcare providers
Resource centers

ASSESSMENT METHODOLOGY

Generally, the health of a community is measured by the physical, mental, environmental and social well-being of its residents. Due to the complex determinants of health, the community health assessment is driven by quantitative and qualitative data collection and analysis from both primary and secondary data sources. In order to make the data and analysis most meaningful to the end user, this report has been separated into multiple components as follows:

- Executive Summary: Community Health Status Assessment
- Community Themes and Strengths Assessment
 - Community Member Survey Analysis
 - Community Partner/Provider Survey Analysis
- Forces of Change Assessment
- Local Public Health System Assessment

- Key Findings
- Appendix
 - Steering Committee Members List
 - Forces of Change Materials
 - Survey Materials

The Executive Summary provides a narrative summary of the data presented in the *2019 Hernando County Community Health Assessment Technical Appendix* and includes analysis of social determinants of health, community health status, and healthcare system resources and utilization. Indicators of the social determinants of health include, for example, socioeconomic demographics, poverty rates, population demographics, uninsured population estimates and educational attainment levels. The community health status assessment includes factors such as County Health Rankings, CDC's Behavioral Risk Factor Surveillance Survey findings, and hospital utilization data. The healthcare system assessment includes data on insurance coverage (public and private), Medicaid eligibility, health care expenditures by payor source, hospital utilization data, and physician supply rate and health professional shortage areas.

The Community Themes and Strengths Assessment component represents the core of the community's input or perspective into the health problems and needs of the community. In order to determine the community's perspectives on priority community health issues and quality of life issues related to health care, surveys were used to collect input from community members at large and healthcare professionals and community partners. The Steering Committee worked with WellFlorida Council to determine survey questions. Detailed analysis of survey responses is included in the Community Themes and Strengths Assessment segment of this report.

The Forces of Change Assessment component summarizes the findings from that assessment. The purpose of the Forces of Change Assessment is to identify forces—such as trends, factors, or events—that are or will influence the health and quality of life of the community and the work of the community to improve health outcomes. The Forces of Change Assessment was completed on June 13, 2019 with the Hernando County Community Health Assessment Steering Committee and other invited community leaders.

The LPHSA was completed in two sessions with one on April 16, 2019 with Steering Committee members and community partners and one with Florida Department of Health in Hernando County staff on May 16, 2019. The LPHSA answers the questions: "What are the components, activities, competencies, and capacities of our local public health system?" and "How are the Essential Services (as defined by the National Association of County and City Health Officials and the Centers for Disease Control) being provided to our community?"

The Key Findings component presents a summary of the results from each of the above components. Recommendations for addressing the identified needs are listed in the Key Findings section.

Executive Summary: Community Health Status Assessment

INTRODUCTION

The Executive Summary: Community Health Status Assessment highlights key findings from the *2019 Hernando County Community Health Assessment Technical Appendix*. The assessment data were prepared by WellFlorida Council, Inc., using a diverse array of sources including the Florida Department of Health Office of Vital Statistics, the U.S. Census Bureau, the Florida Geographic Library, and a variety of health and county ranking sites from respected institutions across the United States and Florida.

A community health assessment is a process of systematically gathering and analyzing data relevant to the health and well-being of a community. Such data can help to identify unmet needs as well as emerging needs. Data from this report can be used to explore and understand the health needs of Hernando County as a whole, as well as for specific demographic, socioeconomic, and geographic subsets. The following summary includes data from these areas:

- Demographics and Socioeconomics
- Mortality and Morbidity
- Health Care Access and Utilization
- Health Disparities and Health Equity

Many of the data tables in the technical report contain standardized rates for the purpose of comparing Hernando County and its individual zip code tabulation areas to the state of Florida as a whole. It is advisable to interpret these rates with caution when incidence rates are low (i.e., the number of new cases is small). Small variations from year to year can result in substantial shifts in the standardized rates. The data presented in this summary include references to specific tables in the *Technical Appendix* so that users can refer to the numbers and the rates in context.

DEMOGRAPHICS AND SOCIOECONOMICS

As population dynamics change over time, so do the health and healthcare needs of communities. It is therefore important to periodically review key demographic and socioeconomic indicators to understand current health issues and anticipate future health needs. The *2019 Hernando County Community Health Assessment Technical Appendix* includes data on current population numbers and distribution by age, gender, and racial group by geographic region. It also provides statistics on education, income, and poverty status. It is important to note that these indicators can significantly affect populations through a variety of mechanisms including material deprivation, psychosocial stress, barriers to healthcare access, and the distribution of various specific risk factors for acute and/or chronic illness. Noted below are some of the key findings from the Hernando County demographic and socioeconomic profile.

POPULATION

In 2010 the U. S. Census Bureau reported the total population of Hernando County as 172,778 (Table 8 in the *2019 Hernando County Community Health Assessment Technical Appendix*; for brevity this resource is referred to as the Technical Appendix in subsequent table citations). According to the U.S. Census Bureau’s American Community Survey (ACS) estimates for 2013-2017, Hernando County’s population numbered 179,144 with males representing 47.9 percent of the population and females at 52.1 percent (Table 23, Technical Appendix), 89.7 percent White, 5.2 percent Black and 12.2 percent Hispanic (Tables 21 and 22, Technical Appendix). About 1.2 percent of the population, or 2,111 individuals, were housed in group quarters; group quarters include correctional institutions, nursing and group homes, military quarters and college dormitories (Table 29, Technical Appendix). The urban population accounted for 80.6 percent of the population (Table 20, Technical Appendix; 2010 U.S. Census data).

According to 2010 U. S. Census data, Hernando County had an older population than the state of Florida as a whole (Table 11, Technical Appendix). This is also seen in 2013-2017 U.S. Census estimates and in particular starting with the age group of 55 to 64 years. In these estimates, those aged 55 and older constituted 41.8 percent of the Hernando County population compared to 32.4 percent for Florida. This statistic is important to note because the healthcare needs of middle-aged and older adults tend to require a broad spectrum of services, including secondary and tertiary care for emerging chronic health conditions as well as more intensive and expensive healthcare services frequently needed by senior adults. The figure below draws data from Table 24 in the Technical Appendix and illustrates the age distribution of Hernando County residents compared to the state of Florida.

FIGURE 2: POPULATION BY AGE GROUPS, 2013-2017.

Source: Table 24 *2019 Hernando County Community Health Assessment Technical Appendix*, prepared by WellFlorida Council, 2019

GENDER, RACE AND ETHNICITY

The U.S. Census Bureau 2013-2017 estimates showed about 89.7 percent of the Hernando County population was White, 5.2 percent Black, with the remainder at fractional percentages representing Asian, American Indian and Alaska Native, Native Hawaiian and Other Pacific Islander, some other race or two or more races (Table 21, Technical Appendix). About 12.2 percent of Hernando County residents identified themselves as Hispanic or Latino. In Florida as a whole, about 24.7 percent of the population identifies as Hispanic or Latino (Table 22, Technical Appendix). These estimates of Hernando County’s racial makeup are shown in Figure 3 below.

FIGURE 3: ESTIMATED POPULATION BY RACE, 2013-2017.

Source: Table 21, 2019 Hernando County Community Health Assessment Technical Appendix, prepared by WellFlorida Council, 2019

LANGUAGES SPOKEN

The U.S. Census Bureau ACS estimates for 2013-2017 indicated that 89.1 percent of Hernando County residents over the age of five (5) years speak only English, a rate notably higher than the state’s 71.3 percent. In Hernando County, an additional 10.9 percent, or an estimated 18,732 individuals, speak other languages. About 68.9 percent of residents speak English “very well” (Table 58, Technical Appendix).

LIFE EXPECTANCY

Data from University of Washington, Institute for Health Metrics and Evaluation for 2010, showed male Floridians, without regard for racial classification, have an average life expectancy of 76.3 years, whereas in Hernando County, the average life expectancy for males is 73.7 years. Life expectancy for females in Hernando County was calculated to be 80 years whereas for females in Florida as a whole that figure was

81.6 years. In 2009, the latest year for which complete data are available, disparities among races were evident. Life expectancy for Hernando County's Black males was 68.3 years compared to 74 years for White males and 76.5 years for Black females compared to 80.7 years for Hernando County White females. Hernando County life expectancies for males and females of both White and Black races were shorter than state life expectancies (Table 4 and 5, Technical Appendix).

ECONOMIC CHARACTERISTICS

Poverty

According to data from the U. S. Census Bureau, Small Area Income and Poverty Estimates, the poverty rate for all individuals in 2017 for Hernando County at 14.0 percent was almost equal to the state of Florida (14.1 percent). With regard to children under the age of 18 years living in poverty, the 2017 rates for Hernando County were again near the state rate at 20.8 and 20.6 percent, respectively (Table 35, Technical Appendix). The figures below depict changes in the poverty rates for Hernando County, Florida and the U.S. from 2014 to 2017 (Table 35, Technical Appendix).

Poverty rates vary by geography in Hernando County. The *2019 Hernando County Community Health Assessment Technical Appendix* includes information about poverty by zip code tabulation areas (ZCTA; Table 36), by select age groups (Tables 37, 38, 39), levels of poverty (Table 38), gender (Table 40), race (Table 41) and household (Tables 42 and 43). According to data from the ACS for 2013-2017, the largest percentages of individuals having lived at 200 to 299 percent of the Federal Poverty Level (FPL) in the past 12 months were found in Brooksville (ZCTA 34614) at 27.5 percent and Spring Hill (34609) at 25.5 percent; both rates exceeded the Florida rate of 18.1 percent (Table 38, Technical Appendix). Data from 2013-2017 show that 68.8 percent of children 0 to 17 years of age in the Spring Hill ZCTA 34607 lived at the 200 percent and above FPL poverty level. In Brooksville (34614) 64.5 percent of children also lived at the same poverty level, followed closely by the Spring Hill ZCTA 34609 where 61.8 percent of children lived at that FPL. By comparison, in Florida as a whole 52.3 percent of children were categorized as living at the same FPL (Table 39, Technical Appendix).

FIGURE 4: POVERTY ESTIMATES BY PERCENT, ALL AGES, 2014-2017.

Source: Table 35, 2019 Hernando County Community Health Assessment Technical Appendix, prepared by WellFlorida Council, 2019

FIGURE 5: POVERTY ESTIMATES BY PERCENT, CHILDREN UNDER 18 YEARS OF AGE, 2014-2017.

Source: Table 35, 2019 Hernando County Community Health Assessment Technical Appendix, prepared by WellFlorida Council, 2019

Poverty affects females and people of color disproportionately throughout the state of Florida and in Hernando County. The ACS data for 2013-2017 indicate that 13.7 percent of males in Hernando County had lived in poverty in the past 12 months compared to 15 percent of females. However, these percentages were lower than state level percentages at 14.4 percent and 16.5 percent, respectively (Table 40, Technical Appendix). For the same time period, there was a much larger disparity between racial and ethnic categories in Hernando County with an estimated 13.5 percent of Whites having lived in poverty in the past 12 months, 24.7 percent of Blacks, and 19.8 percent of Hispanics. Similarly, for Florida as a whole an estimated 13.3 percent of Whites, 24.8 percent of Blacks and 19.8 percent of Hispanics lived in poverty during that period (Table 41, Technical Appendix).

United Way’s Asset Limited, Income Constrained, Employed (ALICE) Report describes populations who are working, but due to day-to-day financial challenges such as childcare costs, transportation, and the high cost of living are existing paycheck to paycheck. The 2018 ALICE Report for Hernando County showed that 30 percent of households in Hernando County were considered ALICE households; statewide 32 percent of households fell into this category. According to ALICE data, the survival budget for a family of two adults and two preschool-age children in Hernando required a full-time, hourly wage of 28.76 dollars to meet annual expenses of 57,528 dollars (Table 44, Technical Appendix).

Income

Income levels in Hernando County were lower than for the state of Florida. Looking at the latest ACS data, the median household income for all races in Hernando County was estimated to be 44,324 dollars in comparison to Florida’s 50,883 dollars. There were differences in median household income among racial and ethnic groups at the county and state levels. The median income for Whites in Hernando County was 44,606 dollars, 34,180 dollars for Blacks, and 39,492 dollars for Hispanics. These median incomes lagged behind the state median incomes for those groups at 53,357 dollars, 37,280 dollars and 44,196 dollars, respectively (Table 46, Technical Appendix).

FIGURE 6: MEDIAN HOUSEHOLD INCOME, BY RACE AND ETHNICITY, 2013-2017.

Source: Table 46, 2019 *Hernando County Community Health Assessment Technical Appendix*, prepared by WellFlorida Council, 2019

The pattern in the distribution of per capita income for 2013-2017 in Hernando County and the state was similar to that of median household income for all races with the Hernando County estimate of 23,495 dollars in comparison to 28,774 dollars at the state level. Similar racial and ethnic differences existed in per capita income at the county and state levels as can be seen in the figure below. Per capita incomes for Whites (24,357 dollars), Blacks (17,765 dollars) and Hispanics (17,009 dollars) were below the state figures (31,765; 17,901; and 20,748 dollars, respectively; Table 47, Technical Appendix). By geography, the highest per capita income for Whites was found in Spring Hill (ZCTA 34607) at 32,926 dollars. For Hernando County Blacks, the Brooksville ZCTA 34613 had the highest per capita income at 25,607 dollars and for Hispanics it was found in the Spring Hill ZCTA 34609 at 19,365 dollars (Table 47, Technical Appendix).

FIGURE 7: PER CAPITA INCOME, BY RACE AND ETHNICITY, 2013-2017.

Source: Table 47, 2019 Hernando County Community Health Assessment Technical Appendix, prepared by WellFlorida Council, 2019

EMPLOYMENT

Recent data on employment in Hernando County and the state of Florida are derived from the Florida Research and Economic database. The unemployment rate in Hernando County has been similar to the state rate and it followed the same path as the state in its decline for a number of years. In 2017, the unemployment rate in Hernando County was 5.1 percent which was almost a full percentage point higher than the state rate of 4.2 percent. Recent unemployment rates for the county and the state are the lowest

they have been since just before the Great Recession of 2008-2009. The recent history of unemployment in Hernando County and the state can be seen in the figure below (Table 53, Technical Appendix).

FIGURE 8: UNEMPLOYMENT RATES, 2008-2017.

Source: Table 53, *2019 Hernando County Community Health Assessment Technical Appendix*, prepared by WellFlorida Council, 2019

EDUCATION

Health outcomes are also influenced in part by access to social and economic opportunities, including the quality of educational opportunities. From 2013-2018, high school graduation rates in Hernando County climbed and remained slightly higher than state rates. The Hernando County high school graduation rate for 2017-2018 was 87.6 percent, which was slightly higher than the state rate of 86.1 percent. For the five most recent academic years for which data are available, Hernando County high school dropout rates have exceeded state rates. Notably, the 2017-2018 dropout rate was 9.0 percent which was twice the state rate of 4.0 percent (Table 56, Technical Appendix). Of Hernando County’s population 25 years of age and older, 60.4 percent had a high school diploma as their highest level of education compared to 49.4 percent for the state of Florida. Hernando County lagged in the estimated percentage of the population aged 25 and older that hold college degrees (Associate, Bachelor’s, Master’s, Doctorate and professional school degrees) at 27.4 percent compared with 38.2 percent for Florida as a whole (Table 57, Technical Appendix).

MORTALITY AND MORBIDITY

Disease and death rates are the most direct measures of health and well-being in a community. In Hernando County, as in Florida and the rest of the United States, premature disease and death are primarily attributable to chronic health issues. That is, medical conditions that develop throughout the life course and

typically require careful management for prolonged periods of time. As previously noted, certain demographic and socioeconomic indicators can reveal how, why, and to what extent certain chronic health problems affect communities. While Hernando County is similar to Florida in many health indicators, some differences exist. Noted below are some key facts and trends in Hernando County mortality and morbidity rates.

COUNTY HEALTH RANKINGS

The County Health Rankings are a key component of the Mobilizing Action Toward Community Health (MATCH), a collaboration project between the Robert Wood Johnson Foundation and the University of Wisconsin Population Health Institute. Counties receive a rank relative to the health of other counties in the state. Counties having high ranks, e.g. 1 or 2, are considered to be the “healthiest”. Health is viewed as a multifactorial construct. Counties are ranked relative to the health of other counties in the same state on the following summary measures:

- I. Health Outcomes--rankings are based on an equal weighting of one length of life (mortality) measure and four quality of life (morbidity) measures.
- II. Health Factors--rankings are based on weighted scores of four types of factors:
 - a. Health behaviors (9 measures)
 - b. Clinical care (7 measures)
 - c. Social and economic (9 measures)
 - d. Physical environment (5 measures)

Throughout the years, some County Health Rankings methodology and health indicators have changed. Thus, caution is urged in making year-to-year comparisons. The data are useful as an annual check on health outcomes, contributing factors, resources and relative status within a region and state. The County Health Rankings add to data a community can consider in assessing health and determining priorities.

The County Health Rankings are available for 2010 through 2019. In the latest rankings, out of 67 counties in the state, Hernando County ranked 40th for health outcomes and 29th for health factors for an overall ranking of 40th. Hernando County’s highest score was in the area of the physical environment at 21st out of 67. Factors considered in the physical environment included drinking water violations, severe housing problems and commuting alone to work. Next highest, at 23rd and in the top third among Florida counties, was the category of health behaviors that examined adult smoking and obesity, physical inactivity and access to exercise opportunities, the food environment, excessive drinking and alcohol-related driving deaths, as well as teen births and sexually transmitted infections. Hernando County’s quality of life ranking was its lowest score at 42nd out of 67 for poor physical and mental health days and low birthweight births. Following closely at 41st out of 67 was the social and economic factor category which examined many indicators related to the social determinants of health such as rates of high school graduation, unemployment, poverty and crime in addition to scores for inequality and social associations (Table 2, Technical Appendix).

TABLE 2: COUNTY HEALTH RANKINGS BY CATEGORY FOR HERNANDO COUNTY, 2010-2019.

	2010	2011	2012	2013	2014	2015	2016	2017	2018	2019

CAUSES OF DEATH

Data in the 2019 Hernando County Community Health Assessment Technical Appendix are reported in the form of crude and age-adjusted death rates. Crude rates are used to report the overall burden of disease in the total population irrespective of age, whereas age-adjusted rates are the most commonly utilized for public health data and are used to compare rates of health events affected by confounding factors in a population over time.

Looking at overall mortality, the age-adjusted death rate from all causes for all races in 2018 was higher in Hernando County at 847.0 than it was at the state level at 679.4 per 100,000, respectively (Table 66, Technical Appendix). The figure below shows the trends in the age-adjusted mortality rate for all causes by race for Hernando and Florida over time. The top five (5) leading causes of death, for all races and ethnicities, in Hernando County for 2013-2018 were 1) Cancer, 2) Heart Disease, 3) Chronic Lower Respiratory Disease (CLRD), 4) Unintentional Injury, and 5) Stroke. These leading causes differ slightly in ranking from Florida as a whole (Heart Disease, Cancer, CLRD, Stroke, and Unintentional Injury; Table 64, Technical Appendix). While the leading cause of death rankings may be similar, age-adjusted death rates for Hernando County residents differed from state rates (Table 67). Figures 9 through 17 below show the age-adjusted death rate trends in the leading causes of death for Hernando County and for Florida (Table 68, Technical Appendix).

FIGURE 9: AGE-ADJUSTED DEATH RATES FOR ALL CAUSES PER 100,000, BY RACE, HERNANDO COUNTY AND FLORIDA, 2013-2018.

As the leading cause of death in Hernando County, it is important to study Cancer death and incidence (i.e., new cases) rates overall as well as deaths and incidence of specific types of Cancer and any populations disproportionately impacted by Cancer. The age-adjusted death rate for Hernando County residents from all Cancers for 2015-2017 at 179.2 per 100,000 population was higher than the state's rate of 151.9. Several types of Cancer had higher death rates for Hernando County residents than for the state as a whole. These included Hernando County's death rate for Trachea, Bronchus and Lung Cancer at 52.3 per 100,000 compared to 38.6; Kidney, Renal and Pelvic Cancer at 5.6 per 100,000 compared to 3.4; and Brain and Other Central Nervous System Cancers at 6.3 per 100,000 compared to the state rate of 4.3 (Table 128, Technical Appendix). In 2016, the latest year for which complete data were available, age-adjusted incidence rates for all Cancers for both Hernando County Whites and Blacks at 468.9 and 456.7 per 100,000 population, respectively, exceeded the state rates of 432.8 and 403.2 per 100,000 population. The Cancer incidence rate in 2016 for Hernando County Hispanics at 330.2 was near the state rate of 328.8 per 100,000 population. From 2011-2016, age-adjusted incidence rates for Lung Cancer for Hernando County Whites at 75.4 per 100,000 population exceeded the state rate of 59.1 per 100,000 population. Although the numbers for Lung Cancer incidence among Hernando County Blacks were too low to report for 2016, the calculated rate was 55.0 per 100,000 population, exceeding the state incidence rate for Lung Cancer among Blacks at 43.9 per 100,000 population. Ovarian Cancer age-adjusted incidence rates among Whites in Hernando County at 20.7

per 100,000 population was also notably higher than the state rate of 11.6 per 100,000 population (Table 135, Technical Appendix). The female Breast Cancer age-adjusted incidence rate in 2016 for Hernando County Hispanics at 114.3 per 100,000 population was higher than the comparable state rate of 92 per 100,000 population. Although higher than the state rate for Hispanics, this incidence rate was lower than the female Breast Cancer incidence rate for Hernando County Whites at 120.5 per 100,000 population (Table 134 and 135, Technical Appendix).

TABLE 3: TOP RANKINGS OF CAUSES OF DEATH BY RACE, ETHNICITY AND GENDER FOR HERNANDO COUNTY AND FLORIDA, 2014-2018.

Cause of Death	Hernando County Ranking						Florida Ranking

AR = All Races, WH = White Races, BR = Black Races, H = Hispanic, F = Female, M = Male, t = tie in ranking; Rankings are based on the total number of deaths for the time period of 2014-2018.

Source: Table 64, 2019 Hernando County Community Health Assessment Technical Appendix, prepared by WellFlorida Council, 2019.

From 2014-2018 there were some differences in the rankings of leading causes of death when examined by race, ethnicity and gender for Hernando County residents. Notably, Diabetes ranked as the third leading cause of death among Blacks in Hernando County while for Whites and Hispanics it ranked sixth. Heart Disease was the leading cause of death among Hernando County Blacks while Cancer led the rankings for Whites and Hispanics. For Hernando County residents unintentional injury deaths ranked third among Hispanics, fourth among Whites, and tied at fifth for Blacks. Suicide was the ninth leading cause of death among Whites compared to 13th and 12th for Blacks and Hispanics, respectively, in Hernando County. For Hernando County males, suicide ranked as the eighth leading cause of death; for females that ranking was 12th (Table 64, Technical Appendix).

Disparities in health outcomes were seen in the age-adjusted death rates for some causes of death for Hernando County residents. In 2018, the age-adjusted death rate per 100,000 population for Whites in Hernando County for Cancer was 165.4 compared to 140.2 for Blacks and 114.4 for Hispanics, also exceeding the state rate for Whites of 146.8 per 100,000 population (Tables 67, 68, 69, Technical Appendix). Similarly, the age-adjusted death rate for Hernando County Whites for Heart Disease at 190.9 in 2018 was higher than the state rate for Whites and county rates for Blacks at 140.2 and Hispanics at 140.1 per 100,000 population (Tables 67, 68, 69, Technical Appendix).

In Hernando County, differences in age-adjusted death rates by geography could be seen for 2014-2018. For Cancer, Hernando County's rate of 170.1 per 100,000 exceeded the 151.9 state rate while the Brooksville (ZCTA 34602) rate of 199.0 is the county's highest followed closely by another Brooksville area (ZCTA 34613) at 194.2 per 100,000 population (Table 73, Technical Appendix). Similarly for Heart Disease deaths, the Hernando County rate of 158.0 per 100,000 exceeds the 152.4 state rate with a rate of 205.5 in a section of Brooksville (ZCTA 34602; Table 74, Technical Appendix). Chronic Lower Respiratory Disease death rates for 2014-2018 were highest in Brooksville (ZCTA 34601) at 88.2 per 100,000 population (Table 75, Technical Appendix). For 2014-2018, data showed that age-adjusted Unintentional Injury death rates were highest in Brooksville (ZCTA 34601 and 34602) at 81.3 and 79.9 per 100,000 population compared to the county rate of 66.8 and state rate of 48.5 per 100,000 population (Table 76, Technical Appendix). Note that age-adjusted rates for several causes of death in Nobleton (ZCTA 34661) exceeded county and state rates. However, because of the low numbers of deaths use caution when comparing these rates (Tables 72-82, Technical Appendix).

BEHAVIORAL RISK FACTORS

Florida Department of Health conducts the Behavioral Risk Factor Surveillance System (BRFSS) survey with financial and technical assistance from the Centers for Disease Control and Prevention (CDC). This state-based telephone surveillance system collects self-reported data on individual risk behaviors and preventive health practices related to the leading causes of morbidity and mortality in the United States. The most recent county-level data available for Hernando County were generated in 2016.

Below are some highlights from the BRFSS data (See Table 136 in the Technical Appendix for full details):

Health Status: About 32.1 percent of Hernando County adults reported having some form of arthritis which was higher than the state rate of 24.8 percent. Likewise, asthma was more reported to be more prevalent with 7.0 percent of Hernando County adults currently having asthma; the state rate was 6.7 percent. Hernando County adults reported higher Cancer prevalence with 9.7 percent indicating that they have ever had a type of Cancer other than Skin Cancer compared to only 7.5 percent at the state level. Cardiovascular Disease was reported at nearly twice the state rate for several indicators. About 18.3 percent of Hernando County adults reported ever having had a heart attack, angina, Coronary Heart Disease or stroke while the state rate was 9.8 percent. Seven (7.0) percent of Hernando County adults report ever having had a stroke compared to 3.5 percent statewide and 10.1 percent of Hernando County adults said they had ever had a heart attack compared to 5.2 percent for Florida. Chronic Obstructive Pulmonary Disease (COPD), emphysema or chronic bronchitis was reported for 10.1 percent of Hernando County adults compared to 7.1 percent for Florida as a whole. More Hernando County adults said (16.9 percent) they currently have a depressive disorder which was slightly higher than the state rate of 14.2 percent. More Hernando County adults report being limited in any way because of physical, mental or emotional problems at 28.1 percent compared to 21.2 percent for the state. This is related to the higher percentage of Hernando County adults who reported using special equipment because of a health problem at 16.5 percent while only 9.9 percent report such use at the state level. Higher than state percentages of Hernando County adults said they had poor mental health on 14 or more of the past 30 days (14.4 percent compared to 11.4 percent statewide), poor physical health on 14 or more of the past 30 days (17.9 percent compared to 12.9 percent), and whose poor physical or mental health kept them from doing usual activities on 14 or more of the past 30 days (27.6 percent compared to 18.6 percent; Table 136, Technical Appendix).

Overweight and Obesity: The data for Hernando County indicated that the percentages of adults who are obese (35.2 percent), and adults who are overweight or obese (68.4 percent) exceeded rates for Florida (27.4 and 63.2 percent, respectively). The percent of adults in Hernando County who reported having a healthy weight at 29.9 percent was below the state rate of 34.5 percent. Relatedly, more Hernando County adults reported being sedentary (33.3 percent) and inactive or insufficiently active (59.8 percent) compared to state rates of 29.8 and 56.7 percent, respectively. Fewer Hernando County adults met muscle strengthening recommendations (34.0 percent) or aerobic recommendations (41.0 percent) when compared to 38.2 and 44.8 percent, respectively, for Florida (Table 136, Technical Appendix).

Tobacco Use: About 18 percent of Hernando County adults reported being current smokers while in the state as a whole the percentage of adult smokers was shown at 15.5. The percentage of Hernando County adults who reported never being a smoker was 47.2 percent compared to 58 percent for Florida adults. Many fewer Hernando County adults who smoke attempted to quit smoking in the past year (49.8 percent) compared to for Florida as a whole (62.1 percent). The percentage of adults in Hernando County who are current e-cigarette users (4.3 percent) was near the state rate (4.7 percent) as was the percentage of Hernando County adults who said they had

never used e-cigarettes at 79.7 percent compared to the state rate of 79.8 percent; Table 136, Technical Appendix).

Health Care Access: According to BRFSS indicators, Hernando County adults were on par with or performed better than state rates for certain measures of healthcare access. Hernando County adults reported slightly rates of health insurance coverage at 85.3 percent compared to 83.7 percent for the state. About 79.8 percent of adults said they had a medical checkup in the past year, which was slightly higher than the state rate of 76.5 percent. More Hernando County adults reported that they had a personal doctor at 79.1 percent while the state rate was 72 percent and Medicare coverage was reported at 48.8 percent among Hernando County adults whereas the state coverage rate was shown at 37.9 percent. Slightly more adults in Hernando County reported having received a flu shot in the past year at 35.9 percent compared to 35.0 percent statewide while a notably higher percentage of Hernando County adults have ever received a pneumococcal vaccine at 40.3 percent compared to 34.6 percent for Florida as a whole. Hernando County adults aged 50 years and older outperformed their counterparts across the state on accessing several Colorectal Cancer screening tests. These include the percentage of Hernando County adults aged 50 to 75 years who had colorectal screening based on current clinical guidelines at 77.7 percent compared to 67.3 percent in Florida and 50.2 percent of Hernando County adults 50 years of age and older who reported ever having had a blood stool test compared to 36.0 percent statewide (Table 136, Technical Appendix).

There were also challenges in healthcare access for Hernando County adults. More adults in Hernando County reported that cost was a barrier to seeing a doctor for care in the past year at 17.6 percent when contrasted with the state rate of 16.6 percent. Only 55.1 percent of Hernando County adults reported having seen a dentist in the past year; the state rate was 63.0 percent. Lower percentages of Hernando County adults reported receiving Cancer screening procedures such as Pap tests in the past year for women 18 years of age and older at 37.3 percent compared to the 48.4 percent state rate and Human Papilloma Virus (HPV) testing among women 18 years of age and older at 30.0 percent lagged behind the state rate of 36.7 percent (Table 136, Technical Appendix).

INFECTIOUS DISEASES

Infectious diseases are caused by pathogenic microorganisms, such as bacteria, viruses, parasites or fungi. These diseases can be spread, directly or indirectly, from one person to another. Among these are Sexually Transmitted Diseases (STDs) that include Gonorrhea, Chlamydia and Infectious Syphilis. Data from 2006-2016 show that STD rates in Hernando County have been lower than state rates (Table 137, Technical Appendix). However, Hernando County and state STD rates have been steadily rising, a trend that may warrant attention. Enteric diseases are those infectious diseases caused by viruses and bacteria that enter the body through the mouth or intestinal system. The 2016 enteric disease rate for Hernando County was 61.1 per 100,000 compared to the state rate of 56.9. From 2006-2016 enteric disease rates in Hernando County fluctuated, exceeding state rates for eight of those years (Table 137, Technical Appendix). Human immunodeficiency virus (HIV) infection case rates and Acquired Immune Deficiency Syndrome (AIDS) case rates from 2006-2017 in Hernando County were well below state rates. In 2017, Hernando County's HIV

infection case rate was 10.6 per 100,000 population and 6.0 for AIDS infection cases as compared to the state rates of 24.1 and 9.9 per 100,000, respectively (Table 138). Vaccine-preventable diseases include Diphtheria, Acute Hepatitis B, Measles, Mumps, Pertussis, Rubella, Tetanus, and Polio. High rates of vaccine-preventable diseases have been sporadic public health challenges in Hernando County. In 2016, Hernando County's vaccine-preventable disease rate of 23.3 per 100,000 population was almost four times higher than the state rate of 5.8 cases per 100,000 population (Table 139, Technical Appendix).

IMMUNIZATIONS

Timely vaccination throughout childhood is essential because it helps provide immunity before children are exposed to potentially life-threatening diseases. The U.S. Food and Drug Administration (FDA) and the Centers for Disease Control and Prevention (CDC) assure vaccines are tested for safety and effectiveness. From 2010-2018, immunization rates for Hernando County kindergarteners were near or exceeded state rates. In 2018, 94.7 percent of Hernando County kindergarteners were fully immunized which slightly exceeded the state rate of 93.7 percent. Seventh grade immunization rates in Hernando County have been somewhat higher than state rates from 2013 to 2018. In 2018, Hernando County's seventh grade immunization rate was the same as the state rate at 96.2 percent (Table 140, Technical Appendix).

MATERNAL HEALTH

Births

For the period of 2016-2018 for all races there were 4,755 births in Hernando County. Of those, 4,082 were births to White mothers, 371 to Black mothers and 699 to Hispanic mothers (Table 105, Technical Appendix). In Florida as a whole, 33.6 percent of births to all races from 2016-2018 had Medicaid as a payment source for labor and delivery services. For Hernando County residents of all races, 58.4 percent were Medicaid-covered births for that same timeframe. Several geographic areas in Hernando County had higher rates including Brooksville (ZCTA 34601) at 65.8 percent, Spring Hill (ZCTA 34606) at 64.4 percent, and Nobleton (ZCTA 34661) at 62.5 percent (Table 115, Technical Appendix).

From 2016-2018 there was a total of 57 Hernando County teen (15 to 17 years of age) births (Table 118, Technical Appendix). Those 57 births to teens of all races represented 1.2 percent of all births to Hernando County residents. The state percent of teen births for all races was also 1.2 percent for that time period. The percentages of Hernando County Hispanic and White teen births at 1.7 and 1.2 percent, respectively, were slightly higher than state rates of 1.4 and 1.0 percent, respectively. For the same period, the percent of Black teen births for Hernando County residents at 1.7 percent was lower than the state rate of 1.9 percent (Table 119, Technical Appendix). Hernando County's rate of repeat births to teens (15 to 17 years of age) of all races for 2016-2018 at 1.2 percent was well below the state rate of 7.2 percent. Notably, from 2014-2018 the rates of repeat births to Hernando County Hispanic and Black teens were zero (0.0) percent (Table 121, Technical Appendix).

Infant Deaths

From 2016-2018 there were 32 infant deaths for all races in Hernando County resulting in an infant mortality rate of 6.7 per 1,000 live births. The comparable state rate for all races was 6.1 per 1,000 live

births. The infant death rate for Hernando County Hispanics for that period at 11.4 per 1,000 live births was twice the state rate for Hispanic infant deaths (5.3 per 1,000 live births). The infant death rates for both Hernando County Whites at 6.1 and Blacks at 10.8 per 1,000 live births exceeded state rates of 4.3 and 11.2 per 1,000 live births, respectively. The highest infant death rates from 2016-2018 for Hispanics occurred in Spring Hill (ZCTA 34607) at 66.7 per 1,000 live births. For Whites the highest rate occurred in Brooksville (ZCTA 34614) at 10.6 per 1,000 live births and for Blacks the 2016-2018 rate was highest in Spring Hill (ZCTA 34606) at 25.0 per 1,000 live births (Table 107, Technical Appendix). It is important to note that the actual numbers in any given year are small, thus the rates of infant death can vary substantially from year to year. When raw numbers are low they can have a high impact on the standardized rates. In this case, the rates can be used to compare groups within a population but they cannot be used to characterize the problem.

Low Birthweight (LBW)

Closely related to infant deaths are Low Birth Weight (LBW) births. From 2016-2018, there were 417 LBW births for all races in Hernando County (Table 108, Technical Appendix). For all races, the percent of LBW births from 2016-2018 in Hernando County was 8.8 percent, nearly the same as the state rate of 8.7 percent. Both Hernando County Whites and Hispanics had higher percentages of LBW births at 8.6 percent and 8.4 percent, respectively, compared to state rates of 7.2 for both Whites and Hispanics. At 11.6 percent, Blacks in Hernando County had a lower rate of LBW births than the state rate for Blacks at 13.8 percent (Table 109, Technical Appendix).

Prenatal Care

The timing of entry into prenatal care can be an important marker of maternal and infant health. From 2016-2018 in Hernando County the percentage of total births that received care in the first trimester was lower than the state rate for all races, Whites, Blacks and Hispanics at 63.9, 65.7, 53.9, and 63.5 percent, respectively. Comparable state rates were 69.2, 71.7, 61.5, and 69.7 percent, respectively. However, for that same period, the percentages of births to Hernando County women that received late (considered third trimester) or no prenatal care were lower than state rates for all races at 3.6 percent, Whites at 3.5 percent, Blacks at 4.9 percent and Hispanics at 3.7 percent compared to 6.0, 5.3, 7.9, and 5.5 percent, respectively (Table 113, Technical Appendix).

MENTAL HEALTH

Reviewing hospital discharge data is one method of gauging the mental health status of a community. The National Institute of Mental Health estimates that approximately one in five adults in the United States suffers from a mental illness in a given year. Common mental health issues such as anxiety and depression are associated with a variety of other public health issues including substance abuse, domestic violence and suicide.

For calendar years 2015 through September 2018, the rates of hospitalizations for mental health reasons for Hernando County residents of all ages, those from 0 to 17 years of age, and those aged 18 years and older exceeded state rates. Most recently for January through September 2018, the rates were 9.5 per 1,000

population for all ages, 7.4 for 0 to 17 years of age, and 9.9 for 18 years and older compared to 7.3, 4.6 and 8.0 per 1,000 for the state, respectively (Table 94, Technical Appendix). The figure below displays these data for Hernando County and Florida.

FIGURE 18: HOSPITALIZATIONS FOR MENTAL HEALTH REASONS, RATES PER 1,000 POPULATION FOR ALL AGES, 0-17 YEARS OF AGE, AND 18 YEARS AND OLDER, HERNANDO COUNTY AND FLORIDA, CALENDAR YEARS 2015 – SEPTEMBER 2018.

Source: Table 93, 2019 *Hernando County Community Health Assessment Technical Appendix*, prepared by WellFlorida Council, 2019.

In Hernando County and the state of Florida the numbers and rates of emergency department (ED) visits for mental health reasons have increased in recent years. For the calendar year 2015 through September 2018 reporting period, Hernando County rates of ED visits per 1,000 population for mental health reasons have exceeded state rates for all ages, those 0 to 17 years of age, and 18 year of age and older. The latest data available for January through September 2018 showed Hernando County rates of 72.8 for all ages, 17.5 for those aged 0-17, and 84.6 for people 18 years and older compared to state rates of 49.6, 8.7, and 59.5 per 1,000 population, respectively, (Table 94, Technical Appendix). These data are shown in Figure 19 below for Hernando County and Florida.

FIGURE 19: MENTAL HEALTH EMERGENCY DEPARTMENT (ED) VISITS, RATE PER 1,000 POPULATION, FOR ALL AGES, 0-17 YEARS OF AGE, AND 18 YEARS AND OLDER, HERNANDO COUNTY AND FLORIDA, JANUARY 2015 – SEPTEMBER 2018.

Source: Table 94, 2019 *Hernando County Community Health Assessment Technical Appendix*, prepared by WellFlorida Council, 2019.

Baker Act Initiations

The percent of involuntary exam initiations, commonly referred to as Baker Act initiations, has exceeded state rates for select age groups in Hernando County for the entire reporting period of 2007-2008 through 2016-2017. Most recently in 2016-2017 there were 1,346 Baker Act initiations in Hernando County, 27.9 percent of which were among children under the age of 18 years and 8.5 percent among adults 65 years of age and older. By comparison statewide, children under the age of 18 years accounted for 16.4 percent and older adults for 7.2 percent of such actions (Table 97, Technical Appendix). The rates and numbers of Baker Act initiations for the general population in Hernando County have fluctuated over the reporting period of 2010-2015. Most recently in calendar year 2015, the Hernando County rate of 589.0 per 100,000 population was well below the state rate of 972.0 per 100,000 population (Table 96, Technical Appendix).

Opioid and Drug Use

Hernando County had 18 opioid overdose deaths in 2017 resulting in the age-adjusted death rate of 12.1 per 100,000 population. While this rate was lower than the state rate of 21.8 per 100,000 population, it is cause for community concern. Drug overdose deaths in Hernando County numbered 28 for the same period resulting in the rate of 16.6 per 100,000. Again, although lower than the state rate of 27.2 it is no less concerning for health and quality of life in Hernando County (Table 102, Technical Appendix). For Hernando County residents in 2017 there were 91 suspected non-fatal opioid-involved overdoses, 70 opioid-involved non-fatal emergency department visits, and 92 opioid-involved non-fatal overdose hospitalizations. Also in 2017 all drug non-fatal overdose emergency department visits numbered 284 and there were 313 all drug non-fatal overdose hospitalizations of Hernando County residents. Relatedly, there were 1,252 adult and 40 juvenile drug arrests of Hernando County residents in 2017 (Table 103, Technical Appendix),

Data from the Florida Birth Defects Registry point to an alarming rise in the number and rate of Neonatal Abstinence Syndrome births among Hernando County mothers. In 2015 the number of such births was eight (8) or a rate of 50.0 per 10,000 live births. The 2016 number was 20 Neonatal Abstinence Syndrome births for a rate of 126.1 per 10,000 live births. By comparison, state rates were 67.3 and 65.8 per 10,000 live births for 2015 and 2016, respectively (Table 102, Technical Appendix).

HEALTH CARE ACCESS AND UTILIZATION

Although health insurance and access to health care do not necessarily prevent illness, early intervention and long-term management resources can help to maintain quality of life and minimize premature death and disability. It is therefore useful to consider insurance coverage and health care access in a community health assessment. The *2019 Hernando County Community Health Assessment Technical Appendix* includes data on insurance coverage, both public and private, Medicaid eligibility, and health care expenditures by payor source. Key findings from these data sets are presented below.

UNINSURED

In 2017 in Hernando County, individuals under the age of 65 without health insurance constituted 15.8 percent of the total county population which was somewhat lower than the state rate of 16.0 percent. For the reporting period of 2010-2017 in Hernando County, the percent of the uninsured population under the age of 65 has been lower than state rates. From 2010-2017, the percent of the uninsured among those under 19 years of age in Hernando County has decreased notably from 14.1 percent in 2010 to 6.8 percent in 2017. Since the passage of the Patient Protection and Affordable Care Act (PPACA) in 2009 uninsured rates in Hernando County have taken a similar path to the state rates in their decline (Tables 51 and 52, Technical Appendix). Figure 20 below presents the trends in uninsured rates in the population less than 65 years of age in both Hernando County and the state.

FIGURE 20: PERCENT OF UNINSURED POPULATION LESS THAN 65 YEARS OF AGE, HERNANDO COUNTY AND FLORIDA, 2010-2017.

SHORTAGE AREAS

Health professional shortage areas (HPSAs) and Medically Underserved Areas (MUAs) are designations based on Federal standards that indicate health care provider shortages in three (3) categories: primary care, dental health, and mental health. Shortages may be geographic-, population- or facility-based. The HPSA score of shortage areas is calculated using the following four key factors: population-to-primary care physician ratio, percent of population with incomes below 100.0 percent of the poverty level, infant mortality rate or low birth weight birth rate (whichever scores higher), and travel time or distance to the nearest available source of care (whichever scores higher). The maximum HPSA score that a facility can receive is 26. The higher the score the lower the access and utilization are of the healthcare facility. The score is applied to a geographic area to determine the MUA index score which can range from 0 to 100. (Table 144, Technical Appendix). Herndon County HPSA and MUA scores are provided in Table 4 below.

TABLE 4: HPSA SHORTAGE AREAS AND MUA BY TYPE AND SCORE, HERNANDO COUNTY, 2019.

Type	Name	Rural Status	Designated Date-Update Date	Score *
Dental				
Low Income Population HPSA	Low Income - Hernando County	Partially Rural	12/20/1996-08/02/2018	18
Correctional Facility	Hernando Correctional Institution	Non-Rural	01/13/2004-07/06/2018	6
Federally Qualified Health Center	Nature Coast Community Health Center**	Non-Rural	09/30/2005-09/30/2005	2
Mental Health				
Low Income Population HPSA	Low Income - Hernando County	Partially Rural	07/25/2002-10/28/2017	17
Federally Qualified Health Center	Nature Coast Community Health Center**	Non-Rural	09/30/2005-09/30/2005	15
Primary Medical Care				
Low Income Population HPSA	Low Income - Hernando County	Partially Rural	02/26/2002-10/25/2018	17
Federally Qualified Health Center	Nature Coast Community Health Center**	Non-Rural	09/30/2007-05/13/2014	5
Medically Underserved Area				
MUA	Low Income - Hernando County	Partially Rural	02/26/2002-03/12/2007	47.1

*The score represents the HPSA score developed for use by the National Health Service Corps (NHSC) in determining priorities for assignment of clinicians. The scores range from 0 to 26 where the higher the score the greater the priority. MUA scores can range from 0 to 100 where the higher score indicates greater need. **Premier HealthCare since 2017.

MEDICAID

In 2018, approximately 20.5 percent of Hernando County residents of all ages received Medicaid benefits (also termed being Medicaid eligible), which was higher than the state at 18.5 percent. When segmented by age, Hernando County also exceeded state percentages for Medicaid eligibles among those 0 to 18 years of age at 56.1 percent and 13.6 percent for those 19 to 64 years of age. The comparable state rates were 48.5 percent and 9.0 percent, respectively. In Hernando County in 2018 about 8.5 percent of those aged 65 years

and older received Medicaid benefits which was a notably lower proportion than the state rate of 14.5 percent (Table 146, Technical Appendix). By geography, in 2014 the Hernando County zip codes with the highest percentage of people receiving Medicaid benefits were in Brooksville (ZCTA 34601) at 24.9 percent and in Spring Hill (34606 and 34608) at 23.9 and 20.5 percent, respectively (Table 145, Technical Appendix). In 2017 Hernando County's rate of median monthly Medicaid enrollment rate of 20,513.5 per 100,000 population was higher than the state rate of 19,607.4 (Table 147, Technical Appendix).

PHYSICIAN, DENTIST AND OTHER HEALTHCARE PROFESSIONAL AVAILABILITY

In fiscal year 2017-2018, the rate of total physicians in Hernando County was 146.4 per 100,000 population which was significantly lower than the state rate of 310.6. Total physician types includes family practice physicians, internists, obstetrics/gynecology, and pediatricians. Rates for individual physical types fluctuated over the period examined (2010-2011 through 2017-2018). Hernando County's rate of family practice physicians increased over the past three years from a low of 7.3 to its most recent rate of 10.9 per 100,000. While this represents a gain for Hernando County, the rate remained nearly half that for Florida as a whole (19.2; Table 150, Technical Appendix).

As of June 2019 in Hernando County, the rate of registered nurses at 1,487.7 per 100,000 population exceeded the state rate of 1,288.7. It is important to note that there continues to be a shortage of nurses at both the state and county levels. Hernando County's rate of licensed practical nurses at 512.7 per 100,000 population also exceeded the state's rate of 306.0. Hernando County fell short of state rates of advanced practice registered nurses (92.5 per 100,000) and physician assistants (21.8 per 100,000) at 133.7 and 40.5 per 100,000, respectively. In the area of mental and behavioral health care, rates of professionals in Hernando County were markedly lower than state rates. At 28.7 per 100,000 the rate of licensed mental health counselors was near half that of the state rate of 53.8 and the Hernando County rate of psychologists at 3.2 was more than seven times lower than the state rate of 23.1 per 100,000 (Table 151, Technical Appendix).

There were 56 dentists in Hernando County in fiscal year 2017-2018 for a rate of 30.0 per 100,000 population; the state rate was 55.8 per 100,000. Between 2008 and 2018, the number of dentists in the county remained relatively steady. Even at its highest rate in 2013-2014 of 39.1 per 100,000 population, the rate of dentists in Hernando County was significantly below the state rate of 53.8 (Table 152, Technical Appendix).

HEALTH CARE FACILITIES

There are numerous licensed health care facilities in Hernando County, although some types are limited. Each year from 2007 to 2018 Hernando County had 660 nursing home beds. Most recently this resulted in the rate of 355.9 per 100,000 population which was lower than the state rate of 399.8 per 100,000 population. Hospital bed rates in Hernando County have exceeded state rates since 2007. In 2018 in Hernando County, there were 670 hospital beds for a rate of 361.3 per 100,000 population; the comparable state rate was 308.2 per 100,000 population (Table 149, Technical Appendix). Some facility types that were available in Hernando County at rates that exceeded state rates include adult family care homes, home health agencies, home medical equipment providers, and hospitals. Hernando County falls short of the state

rate for adult day care centers, health care clinics, homemaker and companion services and nursing homes (Table 148, Technical Appendix).

AVOIDABLE HOSPITALIZATIONS, DISCHARGES AND EMERGENCY DEPARTMENT (ED) VISITS

According to the Centers for Disease Control and Prevention, potentially preventable hospitalizations are admissions to a hospital for certain acute illnesses (e.g., dehydration) or worsening chronic conditions (e.g., Diabetes) that might not have required hospitalization had these conditions been managed successfully by primary care providers in outpatient settings. For the reporting period of January through September 2018 for Hernando County residents, there were 2,032 avoidable discharges among the population aged 0-64 years of age for a rate of 15.4 per 1,000 population. This was higher than the state rate of 9.9 per 1,000 population (Table 158, Technical Appendix). Residents of Spring Hill (ZCTA 34609) accounted for 19.4 percent of those avoidable discharges followed by residents of Brooksville (34601) who accounted for 18.5 percent. For that same reporting period, private insurance was the payor source for 27.3 percent of avoidable discharges for Hernando County residents with Medicare covering another 27.0 percent followed closely by Medicaid at 26.5 percent (Table 159, Technical Appendix).

The ten leading causes of avoidable discharge for Hernando County residents under the age of 65 years for the most recent reporting period of January through September 2018 were as follows (Table 161, Technical Appendix):

1. Dehydration – volume depletion
2. Chronic Obstructive Pulmonary Disease
3. Diabetes “B”
4. Nutritional deficiencies
5. Cellulitis
6. Grand mal status and other epileptic convulsions
7. Gastroenteritis
8. Congestive Heart Failure
9. Asthma
10. Diabetes “A”

From January through September 2018 for Hernando County residents there were 159 preventable dental hospitalizations. This represented 90.9 percent of all dental hospitalizations and was higher than the state rate of 83.1 percent (Table 154). Relatedly, for the same period data show that 94.8 percent of Emergency Department (ED) visits for dental issues by Hernando County residents were preventable. The Hernando County rate was near the state rate of 94.5 percent (Table 154, Technical Appendix).

In 2016, 2017 and for the reporting period of January through September 2018, Hernando County residents made emergency departments (EDs) visits for health care at rates near state rates. For the most recent period, the rate of ED visits by Hernando County residents was 306.9 per 1,000 population while the state rate was 308.9 per 1,000 population (Table 161, Technical Appendix). Medicaid was the payor source for 33.5 percent of those ED visits while Medicare covered 24.6 percent of ED visits by Hernando County

residents for that period, both rates were higher than state rates of 31.3 and 19.2 percent, respectively (Table 162, Technical Appendix). The main reasons for the ED visits by Hernando County residents during the most recent reporting period included cough, unspecified abdominal pain, fever, headache, chest pain, low back pain, nausea, rash, shortness of breath, and head injuries; about 68.7 percent of reasons are classified as “all others” (Table 163, Technical Appendix).

HEALTH DISPARITIES AND HEALTH EQUITY

The Centers for Disease Control and Prevention defines health disparities as “preventable differences in the burden of disease, injury, violence, or opportunities to achieve optimal health that are experienced by socially disadvantaged populations.” (<https://www.cdc.gov/healthyouth/disparities/index.htm> accessed, accessed August 16, 2019). Health equity is described as “the attainment of the highest level of health for all people.” (https://www.cdc.gov/minorityhealth/publications/health_equity/index.html, accessed August 16, 2019). The World Health Organization states that the social determinants of health—those conditions in which people are born, grow, live, work and age—are principally responsible for health inequities. (https://www.who.int/social_determinants/en/ accessed August 16, 2019)

Some notable health disparities, or differences in health status, were found in the course of the Hernando County community health assessment and are described below. The assessment also examined available indicators of structural drivers and community determinants of health inequity as identified by the Prevention Institute in their recent publication (https://www.preventioninstitute.org/sites/default/files/publications/Measuring%20What%20Works%20to%20Achieve%20Health%20Equity%20_Full_Report.pdf, accessed August 16, 2019). Those potential drivers of health inequity in Hernando County are also highlighted below.

HEALTH DISPARITIES

Mortality. As described earlier in this assessment report, data pointed to some racial and ethnic disparities in mortality rates among Hernando County residents. Diabetes ranked as the third leading cause of death among Blacks in Hernando County while for Whites and Hispanics it ranked sixth. Heart Disease was the leading cause of death among Hernando County Blacks while Cancer led the rankings for Whites and Hispanics. For Hernando County residents unintentional injury deaths ranked third among Hispanics, fourth among Whites, and tied at fifth for Blacks. Suicide was the ninth leading cause of death among Whites compared to 13th and 12th for Blacks and Hispanics, respectively, in Hernando County. For Hernando County males, suicide ranked as the eighth leading cause of death; for females that ranking was 12th (Table 64, Technical Appendix).

Age-adjusted death rates for some causes of death for Hernando County residents point to disparate health outcomes. In 2018, the age-adjusted death rate per 100,000 population for Whites in Hernando County for Cancer was 165.4 compared to 140.2 for Blacks and 114.4 for Hispanics, also exceeding the state rate for Whites of 146.8 per 100,000 population (Tables 67, 68, 69, Technical Appendix). Similarly, the age-adjusted

death rate for Hernando County Whites for Heart Disease at 190.9 in 2018 was higher than the state rate for Whites and county rates for Blacks at 140.2 and Hispanics at 140.1 per 100,000 population.

Maternal and Infant Health. Infant mortality rates for all races, Whites, Blacks, and Hispanics were higher than state rates in Hernando County from 2016-2018. There were 32 infant deaths for all races in Hernando County resulting in an infant mortality rate of 6.7 per 1,000 live births. The comparable state rate for all races was 6.1 per 1,000 live births (Table 107, Technical Appendix). The infant death rate for Hernando County Hispanics for that period at 11.4 per 1,000 live births was twice the state rate for Hispanic infant deaths (5.3 per 1,000 live births). The infant death rates for both Hernando County Whites at 6.1 and Blacks at 10.8 per 1,000 live births exceeded state rates of 4.3 and 11.2 per 1,000 live births, respectively. From 2016-2018 in Hernando County the percentage of total births that received care in the first trimester was lower than the state rate for all races, Whites, Blacks and Hispanics at 63.9, 65.7, 53.9, and 63.5 percent, respectively. Comparable state rates were 69.2, 71.7, 61.5, and 69.7 percent, respectively (Table 110, Technical Appendix).

HEALTH INEQUITIES

Life expectancy by geography. Life expectancy in Hernando County was shorter than for the state of Florida. Data showed that male Floridians, without regard for racial classification, had an average life expectancy of 76.3 years, whereas in Hernando County, the average life expectancy for males was 73.7 years. Life expectancy for females in Hernando County was calculated to be 80.0 years whereas for females in Florida as a whole that figure was 81.6 years. In 2009, the latest year for which complete data by county by race were available, differences among races were evident. Life expectancy for Hernando County's Black males was 68.3 years compared to 74.3 years for White males and 76.5 years for Black females compared to 80.9 years for White females in Hernando County (Table 5, Technical Appendix).

Poverty. Geographic pockets of poverty were evident in the 2013-2017 ACS data. The highest rates for individuals of all ages living at 100-200 percent of poverty in the past 12 months were found in Nobleton (ZCTA 34661) at 32.8 percent and Brooksville (34602 and 34601) at 28.7 and 27.6 percent, respectively (Table 39, Technical Appendix). Rates for children 0 to 17 years of age living at 100-200 percent of poverty were highest in the same areas although the highest rate was found in Brooksville (34602) at 48.7 percent followed by Nobleton (34661) at 41.8 percent and Brooksville (34601) at 37.1 percent. The comparable county-wide rate for children living at 100-200 percent of poverty was 29.5 percent while the state rate was 25.4 percent (Table 39, Technical Appendix). For those aged 65 years and older, the 2013-2017 estimates showed that 29.7 percent had lived at 100-200 percent of poverty in the past 12 months in Brooksville (34602), 28.3 percent in the 34604 ZCTA, and 28.0 percent in the 34601 ZCTA. The county and state rates were 23.8 and 21.0 percent, respectively (Table 39, Technical Appendix).

Poverty affects females and people of color disproportionately throughout the state of Florida and in Hernando County. The ACS data for 2013-2017 indicate that 13.7 percent of males in Hernando County had lived in poverty in the past 12 months compared to 15.0 percent of females (Table 40, Technical Appendix). At the same time among Hernando County residents, there was a much larger disparity between racial and ethnic categories with an estimated 13.5 percent of Whites having lived in poverty, 25.0 percent of Blacks,

and 19.8 percent of Hispanics. As a further illustration of differences, in the Brooksville ZCTA 34601, 41.9 percent of Blacks, 25.6 percent of Hispanics, and 14.7 percent of Whites had lived in poverty in the past 12 during the reporting period (Table 41, Technical Appendix).

SUMMARY

In summary, the Hernando County Community Health Assessment and its companion *2019 Hernando County Community Health Assessment Technical Appendix* provide rich data resources to better understand the social, environmental, behavioral and healthcare factors that contribute to health status and health outcomes in Hernando County. The data and findings also point to the need for further in-depth exploration of some factors, gaps and root causes in order to improve health outcomes and quality of life in the county. There are health challenges and community concerns in the areas of child health and safety as manifested in rates of infant mortality and unintentional injuries and indicators of problems with homelessness, abuse, neglect and primary prevention of diseases. Data point to a continuing issue with access to health care in Hernando County. Assessment findings signal that barriers to primary, dental and mental health care impede the effective use of sometimes scarce healthcare resources. Among those obstacles are not only costs and healthcare provider availability, but challenges in helping residents understand and navigate the changing healthcare landscape. The impacts of chronic diseases and conditions such as Cancer, Heart Disease and Chronic Obstructive Pulmonary Disease continue to be seen in Hernando County's mortality data. Trends in some healthier behaviors are encouraging and, coupled with community interest in improving the quality of life in Hernando County, may signal readiness for renewed primary prevention and wellness interventions, policy and environmental change. Substance abuse and mental health issues have emerged as urgent community health problems. Assessment data on suicide, opioid use and overdoses, use of emergency facilities for mental health care, as well as community and healthcare professional input, converge on issues related to substance abuse and mental health problems and their contributing and root causes. As evidenced in this robust community health assessment process and historic commitment to community collaboration, these findings will inform and inspire the next cycle of community health improvement planning for *Hernando County—Where Your Health Matters*.

Community Themes and Strengths Assessment

Quantitative data from a vast array of secondary or administrative data sets can only describe part of a community's core health needs and health issues. A community's perspective of health and the healthcare experience are essential to fully understanding a community's health. The Community Themes and Strengths Assessment answers the questions: "How is the quality of life perceived in your community?" "What factors define a healthy community?" and "What are the most important health problems in your community?" This assessment results in a strong understanding of community issues, concerns, and perceptions about quality of life through the lens of community members and providers.

COMMUNITY HEALTH SURVEYS

METHODOLOGY

A survey was developed to poll individuals about community health issues and the healthcare system from the perspective of Hernando County residents. For the purpose of this assessment, a community member was defined as any person 18 years of age or older who resides in Hernando County; this included seasonal residents. Responses from individuals who did not meet the aforementioned criteria were not included in the data analysis. The survey included 33 questions and eight (8) demographic items. The Qualtrics® web-based surveying platform was used to deliver the survey and collect responses. A paper version of the electronic survey was available upon request. Responses from completed paper surveys were hand-entered into the Qualtrics® database. The survey instrument was tested for readability. Prior to deployment, the electronic version of the survey was pre-tested for functionality and ease of use.

A similar survey was developed to collect input specifically from health care and community partners who provide health care and social services in Hernando County. Health care providers included professionals such as physicians, dentists, and advanced registered nurse practitioners; community partners included social service workers, counselors and others who provide community-based services. The survey had 11 questions and five (5) demographic items and was available exclusively in the electronic format.

For the community survey, a convenience sampling approach (respondents are selected based on accessibility and willingness to participate) was utilized for collecting survey responses. The survey went live on March 18, 2019 and remained available through May 26, 2019. The surveys were available electronically on WellFlorida's website and the link was shared by numerous community agencies. At the time the survey closed there were 451 community surveys in the electronic database classified as follows: 83 incomplete surveys, nine (9) surveys ineligible due to nonresidence in Hernando County, and 0 ineligible due to age. The eligible, completed surveys from 359 Hernando County residents (356 year round, three (3) seasonal) were analyzed. The general demographic factors collected on survey respondents are presented in Table 5 below. Descriptive analysis identified emerging themes from each county's perspective of health and the healthcare experience are presented in the tables and figures that immediately follow.

The healthcare provider and community partner survey was disseminated electronically to providers and partners in the county. From the 147 providers and partners who logged in to the survey, there were 73 eligible, completed surveys for analysis. Those results are presented in Table 23-30 and Figures 31-34 below.

OBSERVATIONS FROM COMMUNITY SURVEY

Figures below summarize the responses to the overarching survey questions. In general, the top ten responses for each question are presented. Questions on the following topics are included in the analysis:

- Factors that most contribute to a healthy community
- Behaviors with the greatest negative impact on overall health

- Most important health problems in the community
- Reasons why individuals did not receive dental, primary, and/or mental care
- Ease and/or difficulty in obtaining and understanding information about health
- Rating of community and individual health

Tables and figures show the percentage of respondents who completed the survey who indicated the given response for a question accompanied by a ranking, if appropriate. The number of completed surveys included in the analysis was 359.

“What do you think contributes most to a healthy community? Choose THREE.”

TABLE 6: TOP 10 RANKED MOST IMPORTANT FACTORS THAT CONTRIBUTE TO A HEALTHY COMMUNITY, HERNANDO COUNTY, BY PERCENT OF RESPONSES, 2019.

Rank	Factors (Percent of Responses)
1	Access to affordable healthcare including primary/family care, specialty care, dental and mental health care (74.9)
2	Job opportunities for all levels of education (43.7)
3	Access to convenient, affordable and nutritious foods (24.5)
4	Affordable housing (21.7)
5	Low crime/safe neighborhoods (20.9)
6	Healthy behaviors (14.2)
7	Awareness of health care and social services (13.6)
8	Good schools (13.1)
9	Clean environment (9.7)
10	Affordable goods/services (9.2)

KEY FINDINGS FROM COMMUNITY SURVEY

The demographic data on Hernando County survey respondents showed some correlation with recent U.S. Census data for the county. About 88 percent of survey respondents identified themselves as White Non-Hispanic, 2 percent Black or African American and 12.2 percent Hispanic or Latino compared to the latest U.S. Census estimates (2013-2017) of 89.7 percent White, 5.2 percent Black or African American and 12.2 percent Hispanic or Latino. Many more survey respondents in Hernando County were female (85.6 percent). Geographic representation of survey respondents was seen with 28.7 percent from Spring Hill (34609) where about 22.5 percent of the county population resides, another 19.5 percent from Spring Hill (34608) with 18.4 percent of the population, and 12.8 percent from a third Spring Hill zip code (34606) where about 14.5 percent of Hernando County residents live. More than one quarter (27.4 percent) of Hernando County survey respondents held bachelor’s degrees and almost a quarter (23.5 percent) reported having graduate degrees and above. The majority of survey respondents were employed full-time (66.0 percent) and carried health insurance through an employer (67.4 percent). Nearly ten percent (9.7 percent) reported having no health insurance. Among Hernando County survey respondents, 20.9 percent reported a combined annual household income of 30,000-49,999 dollars, followed next by 15.3 percent who reported a household income of 50,000-74,999 dollars. About 2.5 percent said their annual household income was less than 10,000 dollars while nearly the same percent (2.8 percent) reported annual household incomes of more than 200,000 dollars.

Hernando County respondents felt the factors that contribute most to a healthy community were access to health care, job opportunities for people with all levels of education, affordable and nutritious foods, and affordable housing. Notably, many of these factors are recognized as social determinants of health. For their county, Hernando County respondents ranked the top five health-related problems as mental health issues,

substance and drug abuse, homelessness, lack of affordable assisted living facilities, and obesity. Consistent with those rankings was the identification of behaviors with the greatest negative impact on health in Hernando County. These behaviors included drug abuse, lack of personal responsibility, alcohol abuse, eating unhealthy foods and drinking sugar-sweetened beverages, distracted driving, not using healthcare resources appropriately, lack of physical activity, tobacco use, violence, and dropping out of school.

Hernando County residents ranked the following as the five healthcare services that are most difficult to obtain: mental/behavioral health services, substance abuse counseling services, dental/oral care, alternative medicine and therapies, and specialty care. The existence of barriers to receiving health care, in particular dental, primary, and mental health care, was a common theme. About 35.4 percent of Hernando County survey respondents said they did not get the dental care they needed and of those, 78 percent said cost was a barrier as was insurance coverage (46.5 percent). Almost a quarter (25.1 percent) of Hernando County survey respondents reported not receiving needed primary care with cost (42.2 percent) and insurance concerns (37.8 percent) being the most common issues. Survey respondents said that 20.9 percent did not receive needed mental health care and cited cost (37.3 percent), no available appointments (36.0 percent), insurance issues (34.7 percent) and no available providers (33.3 percent) as barriers.

In Hernando County, 38.2 percent of survey respondents said they were responsible for getting dental, primary and mental health care for children under the age of 18. Of those, 21.1 percent reported not getting dental care for children due to an insurance issue (37.9 percent), cost (34.5 percent) and lack of appointment availability (31.0 percent). Primary care was not secured by 11.0 percent of child caregivers for their children with the primary barriers being cost (30.0 percent) and lack of insurance coverage or insufficient coverage (20.0 percent). About one quarter (24.1 percent) of Hernando County survey respondents who were responsible for children reported not getting the needed mental health care for their child or children. Appointment availability at 57.6 percent and lack of mental health care providers (51.5 percent) were cited as common barriers.

Survey respondents also reported on barriers experienced by adults in their care. More than 18 percent of survey takers said they had an adult in their care for whom they were responsible to get dental, primary and mental health care. Nearly half (44.8 percent) did not get the dental care needed for the adult in their care. Cost (83.3 percent) and insurance issues (56.7 percent) were notable obstacles. About 22.4 percent did not get the adult in their care the primary care they required, again citing cost (80.0 percent) and insurance issues (53.3 percent). Another 16.4 percent of adults in the care of survey respondents missed needed care, specifically mental health care. The most common barriers were lack of mental healthcare providers (63.6 percent) and a three-way tie among cost, appointment availability, and insurance issues at 27.3 percent.

The three most common challenges experienced in the past 12 months by Hernando County survey respondents were mental health and depression at 20.9 percent, employment-related issues at 17.5 percent, and access to a doctor or dentist at 15.6 percent. More than a third of respondents (34.8 percent) said that none of the challenges listed were issues for them. Also on a positive note, 59.6 percent of Hernando County survey respondents said getting information about health was very easy or easy. A similar percent of respondents (61.0) reported that understanding health information they received from health professionals

was very easy or easy and even more (68.5 percent) felt it was very easy or easy to understand written health information accessed on the Internet or in print.

Hernando County respondents rated overall health of county residents as somewhat healthy (60.4 percent) to unhealthy (29.3 percent) while they rated their personal health status as healthy (42.9 percent) to somewhat healthy (37.9 percent).

OBSERVATIONS FROM PROVIDER SURVEY

Tables and figures below summarize the responses to the overarching questions that were asked of health care providers and community partners serving the residents of Hernando County. There were 73 eligible, completed surveys included in the analysis. In general, the top five ranked responses for each question are presented. Each figure shows the percentage of providers and partners who indicated the given response for a question. Questions on the following topics are included in the analysis:

- Most important factors that define a healthy community
- Behaviors with the greatest negative impact on overall health
- Most important health problems in the community
- Healthcare resources that are difficult to obtain in Hernando County
- Barriers to self-management of chronic diseases and conditions
- Rating of overall community health and accessibility of health care

KEY FINDINGS FROM PROVIDER SURVEY

An array of health care providers and community partners responded to the survey. Nurses represented the largest segment of survey respondents at 32.8 percent. Notably, at 15.1 percent of respondents, mental health and substance abuse treatment professionals represented the next largest segment of healthcare professionals. Occupations of others who participated in the survey included social workers, administrators, case managers and certified nursing assistants to name a few; see Table 23 above for the complete list. Almost half (49.4 percent) of those who completed the survey had been in their profession for more than 20 years while another 20.6 percent were relatively new to their roles with five to nine years of practice.

As did the community at large, providers and partners felt the two most important factors that contribute to a healthy community were access to health care and job opportunities. Providers and partners elevated different factors to round out the list including healthy behaviors and lifestyles and awareness of health and social services. Access to affordable, nutritious foods was a top factor for both the community at large and providers and partners although it was ranked slightly higher by community members. For the most part, providers and partners agreed with the community at large on their list of behaviors with the greatest negative impact on health including drug abuse and alcohol abuse, lack of personal responsibility, unhealthy eating and not using health care services appropriately. Providers and partners ranked the inappropriate use of healthcare services in their top five while the community rated distracted driving to round out their list of top five behaviors with greatest negative impact on health. Similar to community members, Hernando County providers and partners felt mental health problems, substance/drug abuse, homelessness, and obesity were at the top of the list of the most important health issues. Providers and partners ranked child abuse and neglect in their top five list while the community included the lack of affordable assisted living facilities among their most important health-related issues.

Overall accessibility to health care for Hernando County residents was deemed by responding providers and partners as fair (54.7 percent) to good (19.2) with another 13.7 percent ranking it as poor. For providers and partners the healthcare services most difficult to obtain in Hernando County were mental/behavioral health care, substance abuse treatment, specialty, dental and preventive care. According to the providers and partners who took the survey, the most common barriers for their clients in self-management of chronic diseases and conditions were cost (67.1 percent), insurance coverage (50.1 percent), and lack of self-discipline/motivation (32.9 percent). Strategies ranked highest by providers and partners to improve health outcomes included increasing access to mental health services, providing education on available services, focusing on issues of the indigent and uninsured, followed by an increase in outreach and health education programs. More than half (58.9 percent) of the providers and partners who took the survey rated the overall health of Hernando County residents as somewhat healthy with another 35.7 percent giving overall health a rating of unhealthy. Taken together, these survey data show that providers and partners share similar concerns with the community about important health issues, contributing causes and behaviors, and gaps in resources. These survey data provide valuable insights into the health concerns faced by Hernando County residents, healthcare providers and community partners.

Forces of Change Assessment

METHODS

One of the main elements of the MAPP assessment process includes a Forces of Change Assessment. The Hernando County Forces of Change Assessment aimed to identify forces—such as trends, factors, or events—that are or will influence the health and quality of life of the community and its work to improve health outcomes.

- *Trends* are patterns over time, such as migration in and out of a community or a growing disillusionment with government.
- *Factors* are discrete elements, such as a community's large ethnic population, an urban setting, or the jurisdiction's proximity to a major waterway.
- *Events* are one-time occurrences, such as a hospital closure, a natural disaster, or the passage of new legislation.

These forces can be related to social, economic, environmental or political factors in the region, state or United States that have an impact on the local community. Information collected during this assessment will be used in identifying strategic issues.

On June 13, 2019, the Hernando County Steering Committee team convened a group of community leaders to participate in this Forces of Change Assessment. Prior to the Forces of Change discussion, WellFlorida Council presented preliminary data findings from the secondary data review so that participants would be familiar with Hernando County demographics, health conditions and behaviors, and healthcare resources and utilization. Discussions began with brainstorming to identify the possible forces that may hinder or help the community in its quest for improvement in community health outcomes. The tool used to conduct this activity can be found in the Appendix. The *Forces of Change for Hernando County* table on the following pages summarizes the forces of change identified for Hernando County and possible opportunities and/or threats that may need to be considered in any strategic planning process resulting from this MAPP assessment.

Forces Of Change For Hernando County - FACTORS <i>(Prepared by WellFlorida Council – June 2019)</i>			
	FACTORS	THREATS POSED	OPPORTUNITIES CREATED
Behavioral	Unintentional injuries among the top five causes of death	Premature loss of life; high costs of medical care; resources of first responders used	Prevention education; enforcement; policy and environmental change
	Maternal and child health issues such as infant mortality, low birthweight births, late entry into prenatal care	Poor birth outcomes for infant and mother; lifetime health issues; high health and medical care costs	Health education across the lifespan; assurance of conditions in which individuals and families can be healthy; provide preconception health and family planning services
Social	Seniors (55+ years) represent large proportion of the population, segment is growing with increasing numbers of older seniors (85+ years)	Higher demands for healthcare and social services to serve senior citizens; housing may not meet safety and mobility needs	Expansion of businesses that serve senior citizens; housing market expansion; jobs; seniors can share knowledge, experience; volunteer pool
	About 7 percent of population speak Spanish	Spanish-only speaking residents experience barriers to services, do not receive medical, education, social benefits and services needed	Assurance of culturally and linguistically appropriate services
	Lower educational attainment	Untapped talent and skills of youth; unemployment; lower lifetime earnings potential; deficits in workforce	Addition/expansion of vocational, technical and innovative education and career training opportunities
	Representatives from senior and disabled populations not involved in community health improvement planning	Perspectives and needs of these groups missed in determining community health priorities	Extend assessment and planning opportunities to be more inclusive and diverse; new partnerships
Social/Economic	Lack of psychiatrists and aging of those currently in practice	Reduced number of already limited healthcare specialist who provide mental	Partner with regional provider groups; use of telemedicine and other technological

Forces Of Change For Hernando County - FACTORS

(Prepared by WellFlorida Council – June 2019)

	FACTORS	THREATS POSED	OPPORTUNITIES CREATED
		health care; further limits on access to mental health care	advancements in psychiatric care; explore employment of allied health professions
	No residential treatment facilities for substance abuse care in Hernando County	Delayed or no care for those who need it; care provided through criminal justice system and law enforcement	Strategize with partners in health care, criminal justice system, law enforcement, social services for solutions
	No transitional housing	Relapses; homelessness; displaced families	Seek resources through novel partnerships among government, healthcare sector, business and private foundations
Economic	Per capita and median household incomes lower in Hernando County	Lower quality of life and shortened lifespan; homelessness and food insecurity; lack of access to healthcare and services	Strategic economic planning by government, private sector, academic, and community partners
	Service industry jobs and limited employment at living wage levels	Food insecurity and homelessness; outmigration of young workers and families	
	Lack of gainful employment for those displaced from Puerto Rico	Food insecurity and homelessness; isolation; no regular healthcare resulting in chronic health issues	
	Economic development directorship vacancy	Worsening of economic climate	Partnering among business, government, private sector to identify leadership opportunities
	Growth in tourism industry	Impact on environment; no skilled workers to fill jobs; unchecked policy and regulations	New economic development, jobs; institution of Health in All Policies to protect environment while encouraging economic growth

Forces Of Change For Hernando County - FACTORS <i>(Prepared by WellFlorida Council – June 2019)</i>			
	FACTORS	THREATS POSED	OPPORTUNITIES CREATED
Economic/ Governmental	County financial deficit	Cut-back or stopping of county services; impacts to first responders and essential service providers	Seek new elected and employed leaders in county; review of county fiscal practices, policies, and accountability measures
	Limited public transportation	Imposes barrier to access to healthcare services, employment, education	Public/private innovation
Economic/ Environmental	Expansion of Suncoast Parkway	Environmental impact; change in rural setting	Expanded employment during construction phase; possible economic expansion with development along route
Environmental	Hurricanes and extreme weather events	More frequent and more severe weather events; costs for preparedness, response and recovery; impact on environment, natural resources, humans	Seek grants and other resources emerging from climate change research and emergency preparedness

Forces Of Change For Hernando County - TRENDS <i>(Prepared by WellFlorida Council – June 2019)</i>			
	TRENDS	THREATS POSED	OPPORTUNITIES CREATED
Behavioral	Increase in sexually transmitted infections (STIs) and STI increases related to drug use	Spread of infectious diseases; long-term health consequences; healthcare costs	Identification of root causes of rising disease rates; prevention education; seek program, grant/funding support for local, region, state, federal sources
	Patients are more educated consumers of healthcare services	Delayed care due to self-diagnosis and treatment	Assuring the same level of information and education is provided to non-English speaking clients; providing

Forces Of Change For Hernando County - TRENDS <i>(Prepared by WellFlorida Council – June 2019)</i>			
	TRENDS	THREATS POSED	OPPORTUNITIES CREATED
			health information in formats accessible and understandable to a diverse array of clients
Social/ Behavioral	Rise in vaping rates	Health-related issues attributed to tobacco and nicotine use; failure to recognize health risk associated with e-cigarettes and smokeless tobacco; acceptance of generational smoking/tobacco use	Policy change to restrict use of e-cigarettes and alternate nicotine delivery methods; policy, law and regulation enforcement; prevention education and support for addiction recovery
	Increased need for child protective services, more substance-exposed newborns in care	Meeting the educational, health and social needs of children; resources and expertise in schools may be lacking and/or strained	Prevention and early identification and intervention for pregnant/new mothers and their infants; collaborative solutions among partners including education, health, social services, law enforcement, criminal justice, social services
	Rising rates of low birthweight births, poor birth outcomes and changes in fertility rates among Hispanic women	Infant mortality, poor health outcomes, long-term health problems for infants and mothers; emotional and financial impacts on individuals and families	Need to better understand root causes of behaviors and outcomes, assess role of immigration laws in healthcare-seeking behaviors
Social	Outmigration of Hernando County youth	Brain drain; shrinking skilled and unskilled workforce	Institute incentives for educational achievement, employment opportunities, career paths
	Homelessness among school-age children	Food and housing insecurity; health and safety of children and families; barriers to health care services; impediments to educational achievement	Collaboration for system-wide changes to address social determinants of health and meeting basic human needs
Social/ Economic	More mid-level healthcare professionals practicing (e.g., Nurse Practitioners)	Numbers of physicians could further shrink; demands on physician time in supervisory role	More access to healthcare; decrease in Emergency Room use for routine care; decrease in healthcare

Forces Of Change For Hernando County - TRENDS <i>(Prepared by WellFlorida Council – June 2019)</i>			
	TRENDS	THREATS POSED	OPPORTUNITIES CREATED
			costs; improved health outcomes; more emphasis on primary prevention
	Increase in numbers of walk-in and urgent care clinics	Barriers related to costs (e.g., insurance coverage, co-pays, deductibles) still exist; emphasis on secondary prevention and treatment rather than prevention	Relief on Emergency Room demand for services; cost savings in emergency transport and care; collaboration and partnering for primary prevention
	Continued changes to Affordable Care Act	Loss of health insurance coverage and changes in affordability and coverage present barriers; healthcare provider resources spent navigating and complying with system changes	Public benefit program expansion and eligibility changes may cover individuals or groups not previously included; outreach and education on use of healthcare system
	Continued lack of programs and resources for those released from jails and criminal justice system	Recidivism and/or relapse; homelessness, food insecurity; unemployment	Shared, long-term solutions through collaboration of government and community agencies and partners
	Rising cost of food and increasing food insecurity	Food insufficiency, hunger	Locate food banks in geographic areas to meet needs
Economic	Increase use of local jails as revenue generator (by accepting inmates from other counties, state and federal institutions)	Demands on infrastructure, first responders	Employment that provides benefits and advancement opportunities
	Increase in new housing permits	Environmental impact (e.g., Basin Management Action Plan (BMAP) for pollution reduction); need for more schools and government services	More housing available; jobs; increased real estate tax revenue

Forces Of Change For Hernando County - EVENTS <i>(Prepared by WellFlorida Council – June 2019)</i>			
	EVENTS	THREATS POSED	OPPORTUNITIES CREATED
Behavioral	Greater Hernando Weight Loss Challenge	Finding resources and leadership to continue	Positive health behavior change program that can be replicated
Social/Economic	Cross Florida Trail expansion	Environmental impact; costs for continued maintenance and security	Recreation and physical activity resource; expansion of ecotourism
	New housing development for seniors (age 55+)	New demands for healthcare and social services to serve senior citizens; housing may not meet safety and mobility needs	Expansion of businesses that serve senior citizens; housing market expansion; jobs; seniors can share knowledge, experience; volunteer pool
	New grant funding to help house homeless students	Not fully meeting need; administrative costs and continuing maintenance	Expanded housing resources
	Launch of dental bus for services to children at local schools	Need to sustain staffing requirements, administrative and maintenance costs	Collaborative venture among school, healthcare and community partners; expansion to adult services
Economic	New distribution center at the airport	Demands on roads and bridges and other transportation infrastructure	Jobs and further economic expansion
Economic/ Governmental	Medical marijuana legislation	Window drug may increase drug use; early prevention education needed for children; laws, regulations, enforcement must be applied equally	New businesses, economic development around CBD industry
	Expansion of adult education through opening of new technical training programs	Recruiting and retaining students; funding of recurring costs; keeping programs relevant and up-to-date with technological advances	New vocational and career choices; job training; expanded workforce

Forces Of Change For Hernando County - EVENTS <i>(Prepared by WellFlorida Council – June 2019)</i>			
	EVENTS	THREATS POSED	OPPORTUNITIES CREATED
	2020 U.S. Census	Inaccurate count resulting in detrimental changes in representation and resource allocations	Demonstration of changes in population numbers and diversity
Governmental/ Political	Actions of newly elected governor	Leadership change in the Office of the State Surgeon General, change in state's health priorities; Medicaid expansion continues to be in jeopardy; different priorities at the county level that could divert resources away from health issues; potential changes in school policy and practices that are detrimental to health-related issues	Focus on different or new health priority issues for the state, county and school system; new priorities and focus may have positive impacts on health and the environment
	2020 U.S. Presidential election	Changes in leadership may result in government slow down, new directions in policy and funding	Participation in representative government through political action

Local Public Health System Assessment

METHODOLOGY

The National Public Health Performance Standards Program (NPHPSP) assessments help answer such questions as “What are the activities and capacities of our public health system?” and “How well are we providing the Essential Public Health Services in our area?” The dialogue that occurs in answering these questions can help identify strengths and weaknesses and determine opportunities for improvement.

The NPHPSP is a partnership effort to improve the practice of public health and the performance of public health systems. The NPHPSP assessment instruments give guidance to state and local jurisdictions in evaluating their current performance against a set of optimal standards. Through these assessments, responding sites consider the activities of all public health system partners, thus addressing the activities of all public, private, and voluntary entities that contribute to public health within the community.

Three assessment instruments have been designed to assist state and local partners in assessing and improving their public health systems or boards of health. These instruments are the:

- State Public Health System Performance Assessment Instrument,
- Local Public Health System Performance Assessment Instrument, and
- Local Public Health Governance Performance Assessment Instrument.

All NPHPSP assessment instruments are constructed using the Essential Public Health Services (ES) as a framework. The 10 Essential Public Health Services are:

- ES 1 - Monitor Health Status to Identify Community Health Problems
- ES 2 - Diagnose and Investigate Health Problems and Health Hazards
- ES 3 - Inform, Educate, and Empower People about Health Issues
- ES 4 - Mobilize Community Partnerships to Identify and Solve Health Problems
- ES 5 - Develop Policies and Plans that Support Individual and Community Health Efforts
- ES 6 - Enforce Laws and Regulations that Protect Health and Ensure Safety
- ES 7 - Link People to Needed Personal Health Services and Assure the Provision of Healthcare when Otherwise Unavailable
- ES 8 - Assure a Competent Public and Personal Healthcare Workforce
- ES 9 - Evaluate Effectiveness, Accessibility, and Quality of Personal and Population-Based Health Services
- ES 10 - Research for New Insights and Innovative Solutions to Health Problems

Within the local instrument, each ES includes between two and five model standards that describe the key aspects of an optimally performing public health system. Each model standard is followed by assessment questions that serve as measures of performance. Responses to these questions should indicate how well the model standard is being met. The model standard portrays the highest level of performance or “gold

standard.” During the facilitation of the LPHSA, respondents, who represent public health system partners, vote on how well the local public health system meets the model standard. The scoring guidance includes:

- No Activity: 0% or absolutely no activity
- Minimal Activity: Greater than zero, but no more than 25% of the activity described within the question is met within the local public health system
- Moderate Activity: Greater than 25%, but no more than 50% of the activity described within the question is met within the local public health system
- Significant Activity: Greater than 50%, but no more than 75% of the activity described within the question is met within the local public health system
- Optimal Activity: Greater than 75% of the activity described within the question is met within the local public health system

The Hernando County LPHSA took place on April 16 and May 16, 2019. The first LPHSA session focused on the Essential Services that typically involve and require the participation of the broader community. These Essential Services are:

- ES 1 - Monitor Health Status to Identify Community Health Problems
- ES 3 – Inform, Educate, and Empower People about Health Issues
- ES 4 – Mobilize Community Partnerships to Identify and Solve Health Problems
- ES 5 – Develop Policies and Plans that Support Individual and Community Health Efforts
- ES 7 – Link People to Needed Personal Health Services and Assure the Provision of Healthcare when Otherwise Unavailable
- ES 9 – Evaluate Effectiveness, Accessibility, and Quality of Personal and Population-Based Health Services

The Hernando County Steering Committee identified key community sectors to be represented and convened a group of community leaders to complete the LPHSA for ES 1, ES 3, ES 4, ES 5, ES 7 and ES 9.

The May 16th LPHSA session focused on the Essential Services that are typically under the purview of the local health department. These Essential Services are:

- ES 2 – Diagnose and Investigate Health Problems and Health Hazards
- ES 5 – Develop Policies and Plans that Support Individual and Community Health Efforts
- ES 6 – Enforce Laws and Regulations that Protect Health and Ensure Safety
- ES 8 – Assure a Competent Public and Personal Healthcare Workforce
- ES 10 – Research for New Insights and Innovative Solutions to Health Problems

The Florida Department of Health in Hernando County convened a group of local public health department professionals to complete the LPHSA for ES 2, ES 5, ES 6, ES 8, and ES 10.

OBSERVATIONS FROM THE LOCAL PUBLIC HEALTH SYSTEM ASSESSMENT

Based on the self-assessment of the cross-sectional group representing the local public health system partners, Hernando County achieved an overall score of 60.1 (out of a potential 100) which reflects significant activity towards optimal performance. The Essential Services that received the highest scores included ES 2 (diagnose and investigate health problems) at 96.5, ES 5 (develop policies and plans) at 79.2, and ES 4 (mobilize partnerships) at 68.8. The Hernando County public health system's capacity to provide two Essential Services, ES 2 and 5, were rated at optimal levels. About 40 percent of the Hernando County public health system's Essential Service scores ranked in the significant activity category with another 27 percent scoring in the moderate activity category. It is important to note that strong performance in disease surveillance, public health regulation and code enforcement and workforce competency protects individual and population health in Hernando County and contributes to impactful prevention efforts. The Essential Services that received the lowest scores were ES 10 (research for innovative solutions) at 13.9, ES 7 (link people to needed personal health services and assure the provision of health care when otherwise unavailable) at 46.9, and ES 8 (assure a competent public health workforce) at 51.5. Although these were ranked lower relative to the other services, scores still show solid performance and place Hernando County's public health system capacity at the moderate activity range with one score in the minimal activity category. The Hernando County public health system had zero ratings in the no activity category. Compared to the 2016 LPHSA results, the overall capacity rating fell from 71.7 to 60.1; however, both rankings are in the significant activity category. Two Essential Services, ES 2 and 5, were among the top ranked services in both the 2016 and 2019 assessments. Similarly, Essential Services 10 and 7 were ranked at the lowest capacity in both years. Capacity in Essential Service 9 (evaluate services) seems to have made notable gains from the 2016 assessment to currently rank fifth compared to eighth in 2016. The 2019 assessment of capacity to educate and empower people about health issues (ES 3) shows ratings slipped considerably to fall from third highest in 2016 to seventh.

Results point to opportunities for improvement in the Hernando County public health system's efforts to connect residents to needed services as well as defining roles and responsibilities among partners to address unmet needs for health care. The area of research and innovation continues to merit attention. For this system capacity assessment Hernando County partners did not complete the two optional LPHSA assessment components (i.e., rating the local health department's contribution to scores and assigning priority ratings) but rather opted to include those factors in the broader community health assessment prioritization process. As a public health system that strives for improvement and enhanced service to the community, Hernando County partners welcome opportunities to address these and other issues through the community health improvement planning process.

The figures below provide a snapshot of scores from the Hernando County LPHSA. Figure 35 summarizes the composite performance measures for all ten Essential Services and shows, by percentage, Hernando County's scores in the five activity level categories. According to these scores, almost 60 percent of the system activity was rated as significant to optimal. The Essential Service scores seen below in Figure 36 are the calculated average of model standard question scores. The range of scores for each Essential Service is represented by a horizontal bracketed line through the middle of each bar. Shorter lines indicate closer

agreement on the scores by participants in response to the questions posed in the LPHSA. Following the figures is a summary of the strengths, weaknesses and opportunities that emerged from discussions. For a more detailed examination of the LPHSA scores, please review the full report found in the Addendum to the *2019 Hernando County Community Health Assessment Technical Appendix*. The full report includes scores for each model standard question related to each Essential Service.

Summary of Notes from Hernando County LPHSA Discussions

Optimal Activity	76-100%
Significant Activity	51-75%
Moderate Activity	26-50%
Minimal Activity	1-25%

Strengths	Weaknesses	Opportunities for Improvement
Essential Service 1: Monitor Health Status to Identify Community Health Problems Average Score: 63.9 (Significant Activity) Relative Rank: 4th		
<ul style="list-style-type: none"> Community health assessments conducted every three years Hernando County has used the MAPP process to assure a consistent and thorough process Data are widely available online through Florida CHARTS and in reports published by WellFlorida Council Partners have varied capacities to use technology (hardware and software) to collect, analyze, publish and share data Partners are aware of statutory requirements to report to health registries; recognize value of reporting to voluntary registries 	<ul style="list-style-type: none"> Broader participation in community health assessment process by community partner organizations would be welcomed; could do much better at sharing assessment results and reports; should promote use of assessment documents in planning by partner organizations and governmental entities Need to look for ways to access the latest data and present local data that are meaningful for understanding health issues and identifying populations and geographies at higher risk for poor health outcomes Availability of population health registry data may not be widely known 	<ul style="list-style-type: none"> Continue to identify new partners to reflect population changes and diversity, encourage participation and promote the dissemination of the final community health assessment documents Routinely update and augment community health assessment with data Highlight the use of population health registry data in community health assessment documentation
Essential Service 2: Diagnose and Investigate Health Problems and Health Hazards Average Score: 96.5 (Optimal Activity) Relative Rank: 1st		
<ul style="list-style-type: none"> Strong disease and environmental surveillance in county, region and state DOH staff know how to navigate the system and can share information with partners 	<ul style="list-style-type: none"> To remain current need resources for disease surveillance, including technology assets and training for surveillance partners; relationships among surveillance partners can impact system functioning 	<ul style="list-style-type: none"> Pursue funding for surveillance resources Develop and foster relationships among surveillance partners

Strengths	Weaknesses	Opportunities for Improvement
<ul style="list-style-type: none"> Written protocols and standards are followed and evaluated, updated regularly State laboratory services available and accessible 24/7 if needed 		
Essential Service 3: Inform, Educate and Empower People about Health Issues Average Score: 58.3 (Significant Activity) Relative Rank: 7th		
<ul style="list-style-type: none"> Health information is generally widely available, community partners make substantial efforts to coordinate health education and promotion efforts The success and expansion of CHIPP is an example of how effective Hernando County partners have been in their work to engage community organizations, stakeholders, policymakers and residents in health education and health promotion work Some partner organizations have robust communication plans and trained public information officers Partners shared examples of educating policymakers and elected officials while adhering to various agency restrictions on lobbying and advocacy Partners shared examples of communication plans such as the Department of Health and County Emergency Management Emergency communication plans and resources are strengths, improving and assuring communications during emergencies is a priority 	<ul style="list-style-type: none"> More participation from the community at large is always needed, particularly from groups that have not historically been actively engaged in planning and implementing interventions and programs Capacity for developing communication plans varies among partner organizations Organizational capacity can be helped or hindered by their use of communication technology and ability to identify priority populations Keeping up with emerging technologies can be a challenge, affordability of equipment is ongoing issue 	<ul style="list-style-type: none"> Explore novel tactics for outreach and community engagement Make communication planning and training resources available Use experienced and skilled PIOs as mentors Assure clearer understanding of the communication platforms available to public health system partners to better share health messages Identify grants and other programs to expand communication resources and training

Strengths	Weaknesses	Opportunities for Improvement
Essential Service 4: Mobilize Community Partnerships to Identify and Solve Health Problems Average Score: 68.8 (Significant Activity) Relative Rank: 3rd		
<ul style="list-style-type: none"> • Hernando County community partner organizations work well together and welcome new participants • CHIPP is a long-standing, respected organization with a proven track record of mobilizing the community to address health issues • Numerous community groups and partnerships track progress and have written objectives to document outcomes and impact 	<ul style="list-style-type: none"> • While 211 serves as the community directory, perhaps not all Hernando community organizations and residents are aware of its availability • Not all community partnerships dedicate resources to assessing and evaluating their effectiveness which may be related to lack of resources and/or competing priorities and demands for services 	<ul style="list-style-type: none"> • Continuous updating and promoting of 211 • Encourage progress reporting and accountability among community organizations • Recognize and celebrate the achievements of partnerships
Essential Service 5: Develop Policies and Plans that Support Individual and Community Health Efforts Average Score: 79.2 (Optimal Activity) Relative Rank: 2nd		
<ul style="list-style-type: none"> • DOH-Hernando is a respected community agency and has the support of community residents, partners and elected officials • Public health system partners educate policymakers and elected officials about potential health impacts of regulations and laws • Examples were provided of instances of policymakers and elected leaders being unaware of emerging health issues but being open to listening to subject matter experts • Hernando's CHIPP is recognized by other counties as a model • Hernando County has strong county emergency response plans and partners with 	<ul style="list-style-type: none"> • Public health could always use more resources and sustained community support; must assure that public health has resources for both routine and emerging health issues • Relationships with policymakers and elected officials must be developed and nurtured which can take time to be established • Community health assessment and health improvement planning work requires regular and dedicated work of many which is not unique to Hernando County but inherent in effective and impactful processes as seen here • Emergency Operation Plans are lengthy 	<ul style="list-style-type: none"> • Continue to involve policymakers and elected officials, business leaders in the CHIPP, assessment process and implementation strategies to address long-standing and emerging health problems • Organizations could have written guidelines or standard operating procedures for regular internal policy review • Consider a "Health in All Policies" approach to local and regional policy development • More and wider communication about CHIPP successes, challenges, and opportunities for all to participate • Continue to engage organizations, businesses,

<p>evaluations and use guidelines when available</p> <ul style="list-style-type: none"> • Examples of use of technology to improve personal health services were provided • Local public health system assessment is done as part of the MAPP process every three years 		<ul style="list-style-type: none"> • Apply and highlight use of system capacity assessment data when identifying community health priorities and selecting implementation strategies
<p>Essential Service 10: Research for New Insights and Innovative Solutions to Health Problems Average Score: 13.9 (Minimal Activity) Relative Rank: 10th</p>		
<ul style="list-style-type: none"> • Public health system partners are interested in research findings and innovations • Performance management and performance improvement are emerging priorities for many partners • Public health workforce is accustomed to employing best- and/or promising practices that emerge from studies 	<ul style="list-style-type: none"> • Competing priorities can make participation in research difficult • Resources, including leadership and staff time, are needed to make regular participation with academic partners on research projects feasible • Research is low on the priority list for most front-line health and social service provider staff • Resources for research are very limited 	<ul style="list-style-type: none"> • Identify strategies to support quality improvement and the advancement of emerging, innovative and promising practices • Pursue partnerships with local and regional research organizations and academic institutions

Intersecting Themes and Key Considerations

This section is divided into three parts. First, the Intersecting Themes and Key considerations are summarized in order to identify the key health needs and issues in Hernando County. Second is a section describing Strategic Issue Areas that were identified as part of the assessment process and includes some key considerations on community health improvement planning in general and some specific structural recommendations regarding the community health improvement planning infrastructure in Hernando County. Third is a section dedicated to links to major national databases of community health improvement best practices that will be critical resources for identifying proven effective programs and interventions that could be implemented in Hernando County.

INTERSECTING THEMES AND KEY CONSIDERATIONS

Presented below are the intersecting themes or major health needs and issues in Hernando County as identified through the community health assessment process. The themes described below emerged from the four assessments conducted as part of Hernando County's MAPP process. That process included the Health Status assessment through a comprehensive secondary data review, the Local Public Health System capacity assessment using the CDC assessment tool, the Forces of Change process of identifying opportunities and threats that currently impact and pose potential future threats and opportunities to health, and lastly the Community Themes and Strengths Assessment conducted through primary data collection to hear community opinions and perspectives on health issues. These intersecting themes were also considered in the identification and prioritization of potential strategic issues. For ease of understanding common themes and root causes, the key issues are grouped below into categories including social determinants of health, health status and health behaviors, health resources, and community infrastructure. Many of the key issues emerged as concerns across the intersecting theme areas shown below; however, each issue is only listed once.

INTERSECTING THEMES/HEALTH NEEDS AND ISSUES

- Social Determinants of Health
 - Poverty
 - Limited employment opportunities
 - Lack of affordable housing
 - Homelessness
 - Food insecurity
- Health Status and Health Behaviors
 - Causes of death
 - Cancer
 - Heart Disease
 - Chronic Lower Respiratory Disease

- Diabetes
- Unintentional Injuries including motor vehicle crash injuries and deaths
- Infant mortality
- Late entry into prenatal care
- Substance-exposed newborns
- Child health and safety
- Mental health problems
- Substance and drug abuse
- Tobacco use including e-cigarette and smokeless tobacco products
- Distracted driving
- Violence and domestic violence
- Dental and oral health issues
- Overweight and obesity
- Poor nutrition and food choices
- Health Care Resources
 - Inappropriate use of Emergency Departments for routine primary, dental and mental health care
 - Lack of health care providers and services, specialty care physicians, dentists, residential treatment facilities
 - Lack of affordable health insurance and sufficient health insurance coverage
 - Rising costs of health care and prescription medication
 - Barriers to linking people to needed health and social services
- Community Infrastructure and Environment
 - Persistent issue of public transportation
 - Threats to natural resources and the environment, changing frequency and intensity of weather events including hurricanes
 - High capacity to mobilize partners and the community to address health problems

STRATEGIC PRIORITY ISSUE AREAS

The August 20th meeting of the Hernando County Community Health Assessment Steering Committee was dedicated to reviewing the data and findings from the entire community health assessment process including the secondary health data review or Health Status Assessment, Forces of Change and Local Public Health System Assessments, and Community Themes and Strengths primary data collection via the community and provider surveys. The steering committee discussed the characteristics of strategic priorities to assure a common understanding of their scope, scale, and purpose. Prioritization criteria included issue importance, urgency, impact, feasibility and resource availability. Table 31 lists the characteristics of each criterion.

TABLE 31: CRITERIA FOR RANKING STRATEGIC PRIORITY ISSUES, HERNANDO COUNTY, 2019.

Importance and Urgency	Impact	Feasibility	Resource Availability
<ul style="list-style-type: none"> • Issue severity • Burden to large or priority populations • Of great community concern • Focus on equity 	<ul style="list-style-type: none"> • Potential effectiveness • Cross cutting or targeted reach • Ability to demonstrate progress 	<ul style="list-style-type: none"> • Community capacity • Political will • Acceptability to the community 	<ul style="list-style-type: none"> • Financial costs • Staffing • Stakeholder support • Time

Source: Adapted from National Association of County and City Health Officials (N.D.). *Community Health Assessment and Improvement Planning*. Retrieved August 28, 2019, <https://www.naccho.org/programs/public-health-infrastructure/performance-improvement/community-health-assessment/mapp/phase-4-identify-strategic-issues>

In small workgroups, steering committee members reviewed, discussed and synthesized assessment findings into a list of up to ten (10) priority health issues. Using the same prioritization criteria, participants narrowed their lists to no more than five (5) issues. Each workgroup presented and advocated for their priorities. A facilitated consensus workshop moved the discussion from creating the list of issues to identifying the intersecting themes. Through the consensus process the intersecting themes converged into five (5) broad topic areas of mental health and substance abuse, housing, access to affordable care, healthy behaviors, and child health. Steering committee members then used a multi-voting process to arrive at four (4) strategic priority issue areas. They further discussed and refined the issue labels to more concisely state the overarching theme of each along with consolidating the potential goal areas that will drive and support future interventions. The priority issue areas below will move forward for consideration in the Community Health Improvement Plan.

STRATEGIC PRIORITY ISSUE AREAS IDENTIFIED

- Child Health including
 - Safety and injury prevention
 - Abuse/neglect
 - Early childhood health and wellness
- Access to Care including
 - Enhancing access and removing barriers to primary care, mental health services, and dental care
 - Health literacy on appropriate use of health care services and resources
 - Linking people to needed health and social services
 - Addressing costs, affordability, benefit programs and wise use of health insurance

- Healthy Behaviors including
 - Primary prevention and wellness
 - Healthy eating and access to sufficient, nutritious, affordable foods
 - Physical activity and the environments and policies that encourage activity
 - Building on success of Greater Hernando Weight Loss Challenge
- Substance Abuse and Mental Health including
 - Access to primary mental health care
 - Addressing resources for substance abuse treatment and recovery
 - Transitional housing

Thoughtful consideration was also given to issues that were ultimately set aside. It was decided that transportation, although a persistent problem in Hernando County, was being addressed as a countywide infrastructure and resource investment issue by county government. However, strategies to reduce transportation barriers to healthcare and social services will be considered in the community health improvement action plans across the strategic priority areas. The issue of housing including homelessness and affordability was examined and debated. There was agreement on the importance of housing in assuring health and safety of residents. The group also agreed that there were problems with housing affordability and availability that impacted some groups disproportionately, such as homeless families with children, veterans, and recovering substance users. Weighing the importance of the issue, considering the community groups and agencies already tasked with addressing housing and homelessness, and balancing feasibility and resources available for implementing new community health improvement plan activities, the Steering Committee reluctantly tabled housing as a strategic priority.

Steering Committee members discussed and acknowledged that many of the strategic priority issues have shared root causes, related contributing factors and will be addressed by common strategies that will have the potential to address multiple issues simultaneously. As part of the community health assessment process, a number of recommendations and considerations for planning and sustained, successful implementation emerged as a result of discussions among community partners. As Hernando County partners move forward with community health improvement planning, it is important to bring these points forward. These points are listed below.

KEY CONSIDERATIONS

- Promote a culture of community health as a system of many diverse partners and systems
- Foster a unifying community organizing principle and capacity building system around shared outcomes and measures
- Create a core system of metrics to monitor the performance of a community health system and to inform collective and individual entity investment in community health
- Develop resource availability and educate on the appropriate utilization of services and programs

- Enhance or create preventive programs, services and resources to address behaviors that lead to or exacerbate chronic conditions including mental health problems, substance abuse, and tobacco use
- Enhance or create programs to more effectively and efficiently manage chronic diseases and oral health
- Enhance or create programs to address obesity and promote attainment of a healthy weight
- Enhance or create policy, programs and environmental change to address unintentional injuries and suicide
- Create initiatives to increase the availability of primary, specialty, dental and mental health professionals and services
- Consider policy, environmental change, interventions, and programs to address root causes that include social determinants of health, and examine social structures and institutions that contribute to health inequities

INTERVENTIONS: GENERAL APPROACHES AND SPECIFIC OPPORTUNITIES

Prior to any type of prioritization of interventions and activities to address critical health needs and issues in Hernando County, community partners should review existing databases of evidence-based and promising practices. These resources have been designed to catalog the best practices for addressing countless key community health issues. Each of these resources is designed a bit differently, but at the core, either provides a comprehensive and regularly updated list of promising and evidence-based practices or have an interface that allows partners to identify best practices based on the issue, type of intervention or target population. In general, these databases should be consulted prior to any type of intervention identification or prioritization with the community. Presented below are six of the most frequently utilized and widely respected databases of practices for improving community health.

- Center for Disease Control and Prevention Community Health Improvement Navigator
<http://www.cdc.gov/chidatabase>
- County Health Rankings Policy Database – University of Wisconsin Population Health Institute and Robert Wood Johnson Foundation
<http://www.countyhealthrankings.org/policies/>
- The Community Guide – U.S. Department of Health and Human Services, Community Prevention Services Task Force
<http://www.thecommunityguide.org/index.html>
- Healthy People 2020 Evidence-Based Resources – U.S. Department of Health and Human Services
<https://www.healthypeople.gov/2020/tools-resources/Evidence-Based-Resources>
- Evidence-Based Practices (EBP) Web Guide – Substance Abuse and Mental Health Services Administration (SAMHSA), U.S. Department of Health and Human Services
<https://www.samhsa.gov/ebp-web-guide>
- Community Tool Box – The University of Kansas KU Work Group for Community Health and Development
<http://ctb.ku.edu/en/databases-best-practices>

One key feature of each of these resources is to qualify the quality of the evidence upon which these practices are deemed best practices. When reviewing practices at these sites, one must keep in mind the following qualifiers for the quality of and the type of evidence upon which the intervention is based:

Case-Control Study: A case-control study identifies all incident cases that develop the outcome of interest and compares their exposure history with the exposure history of controls sampled at random from everyone within the cohort who is still at risk for developing the outcome of interest.

Cohort Study: A cohort study is a clinical research study in which people who presently have a certain condition or receive a particular treatment are followed over time and compared with another group of people who are not affected by the condition. May or may not determine an evidence-based practice.

Cross-Sectional or Prevalence Study: A cross-sectional or prevalence study is a study that examines how often or how frequently a disease or condition occurs in a group of people. Prevalence is calculated by dividing the number of people who have the disease or condition by the total number of people in the group. May or may not determine an evidence-based practice.

Effective Practice: A program that has been scientifically evaluated and has quantitative measures of improvement but those measures are not statistically significant.

Evidence-Based: The study is of peer review quality and presents statistically significant results in a scientific manner. The intervention may be categorized simply as “evidence-based” or as “low”, “moderate” or “strong” depending on the strength of the statistical significance.

Evidence-Based (Low or Suggestive): While there are no systematic experimental or quasi-experimental evaluations, the evidence includes non-experimental or qualitative support for an association between the innovation and targeted healthcare outcomes or processes, or structures in the case of healthcare policy innovations.

Evidence-Based (Moderate): While there are no randomized, controlled experiments, the evidence includes at least one systematic evaluation of the impact of the innovation using a quasi-experimental design, which could include the non-random assignment of individuals to comparison groups, before-and-after comparisons in one group, and/or comparisons with a historical baseline or control. The results of the evaluation(s) show consistent direct or indirect evidence of the effectiveness of the innovation in improving targeted healthcare outcomes and/or processes, or structures in the case of healthcare policy innovations. However, the strength of the evidence is limited by the size, quality, or generalizability of the evaluations, and thus alternative explanations cannot be ruled out.

Evidence-Based (Strong): The evidence is based on one or more evaluations using experimental designs based on random allocation of individuals or groups of individuals (e.g. medical practices or hospital units) to comparison groups. The results of the evaluation(s) show consistent direct evidence of the effectiveness of the innovation in improving the targeted healthcare outcomes and/or processes, or structures in the case of healthcare policy innovations.

Evidence of Ineffectiveness: Strategies with this rating are not good investments. These strategies have been tested in many robust studies with consistently negative and sometimes harmful results.

Experimental Study: An experimental study is a type of evaluation that seeks to determine whether a program or intervention had the intended causal effect on program participants.

Expert Opinion: Strategies with this rating are recommended by credible, impartial experts but have limited research documenting effects; further research, often with stronger designs, is needed to confirm effects.

Experimental Study: An experimental study is a type of evaluation that seeks to determine whether a program or intervention had the intended causal effect on program participants.

Individual Study: Scientific evaluation of the efficacy of an intervention in a single study.

Insufficient Evidence: Strategies with this rating have limited research documenting effects. These strategies need further research, often with stronger designs, to confirm effects.

Mixed Evidence: Strategies with this rating have been tested more than once and results are inconsistent or trend negative; further research is needed to confirm effects.

Nonsystematic Review: A non-systematic review is a critical assessment and evaluation of some but not all research studies that address a particular issue. Researchers do not use an organized method of locating, assembling, and evaluating a body of literature on a particular topic, possibly using a set of specific criteria. A non-systematic review typically includes a description of the findings of the collection of research studies. The non-systematic review may or may not include a quantitative pooling of data, called a meta-analysis.

Peer-Reviewed: A publication that contains original articles that have been written by scientists and evaluated for technical and scientific quality and correctness by other experts in the same field.

Pilot Study: A pilot study is a small-scale experiment or set of observations undertaken to decide how and whether to launch a full-scale project.

Practice-based Example: A practice-based example is an original investigation undertaken in order to gain new knowledge partly by means of practice and the outcomes of that practice.

Promising Practice/Good Idea: The program evaluation is limited to descriptive measures of success.

Randomized Control Trial: A randomized control trial is a controlled clinical trial that randomly (by chance) assigns participants to two or more groups. There are various methods to randomize study participants to their groups.

Scientifically Supported: Strategies with this rating are most likely to make a difference. These strategies have been tested in many robust studies with consistently positive results.

Some Evidence: Strategies with this rating are likely to work, but further research is needed to confirm effects. These strategies have been tested more than once and results trend positive overall.

Systematic Review: A systematic review is a critical assessment and evaluation of all research studies that address a particular issue. Researchers use an organized method of locating, assembling, and evaluating a body of literature on a particular topic using a set of specific criteria. A systematic review typically includes a description of the findings of the collection of research studies. The systematic review may or may not include a quantitative pooling of data, called a meta-analysis.

Systematic Review – Insufficient Evidence: The available studies do not provide sufficient evidence to determine if the intervention is, or is not, effective. This does NOT mean that the intervention does not work. It means that additional research is needed to determine whether or not the intervention is effective.

Systematic Review – Recommended: The systematic review of available studies provides strong or sufficient evidence that the intervention is effective. The categories of "strong" and "sufficient" evidence reflect the Task Force's degree of confidence that an intervention has beneficial effects. They do not directly relate to the expected magnitude of benefits. The categorization is based on several factors, such as study design, number of studies, and consistency of the effect across studies.

Systematic Review – Recommended Against: The systematic review of available studies provides strong or sufficient evidence that the intervention is harmful or not effective.

The following table presents results of a query of these best practices for some of the key health issue and needs areas in Hernando County and are worthy of consideration as community interventions. Some of these best practices may already be in place in Hernando County and only need enhancement while others represent new opportunities.

TABLE 32: PROMISING INTERVENTIONS.

Issue	Practice or Intervention	Effectiveness	Source
Chronic Disease	Weekly Home Monitoring and Pharmacist Feedback Improve Blood Pressure Control in Hypertensive Patients	Evidence-Based (Strong)	CDC Community Health Improvement Navigator: http://wwwn.cdc.gov/CHIdatabase/it-ems/weekly-home-monitoring-and-pharmacist-feedback-improve-blood-pressure-control-in-hypertensive-patients
Chronic Disease	Help Educate to Eliminate Diabetes (HEED) A culturally appropriate and community based peer-led lifestyle intervention (Project HEED). These peer-led lifestyle interventions promoted and encouraged healthier life-style changes amongst the participants of the study by educating them in portion control, physical activities, and healthier and affordable food options.	Effective Practice	Healthy Communities Institute: http://cdc.thehcn.net/index.php?controller=index&module=PromisePractice&action=view&pid=3841

Issue	Practice or Intervention	Effectiveness	Source
Chronic Disease	<p>Community Referral Liaisons Help Patients Reduce Risky Health Behaviors, Leading to Improvements in Health Status</p> <p>The Community Health Educator Referral Liaisons project helped patients to reduce risky health behaviors (e.g., drinking, smoking, physical inactivity) by linking them with community resources, offering counseling and encouragement over the telephone, and providing feedback to referring physicians. Originally implemented between February 2006 and July 2007, the program included four liaisons who worked with 15 primary care practices in three Michigan communities, referring patients to community preventive health services and offering counseling and encouragement to help patients achieve their health-related goals.</p>	Evidence-Based (Moderate)	<p>CDC Community Health Improvement Navigator: http://www.cdc.gov/CHIdatabase/it-ems/community-referral-liaisons-help-patients-reduce-risky-health-behaviors-leading-to-improvements-in-health-status</p>
Chronic Disease	<p>Diabetes Educators Provide Counseling at Worksites, Leading to Enhanced Knowledge, Improved Outcomes, and Reduced Absenteeism</p> <p>Chrysler LLC and Health Alliance Plan of Michigan worked with other organizations to create the Driving Diabetes Care Experts program, which screens employees to identify those with diabetes and brings diabetes educators to three Chrysler office and factory worksites for scheduled one-on-one or group counseling sessions with these employees. Sessions help to identify diabetes-related concerns and set goals for diabetes management activities, such as dietary changes, exercise, and medication management. Pre- and post-implementation results from two sites show that the program led to enhanced diabetes knowledge; better blood sugar, cholesterol, and weight control; and less absenteeism.</p>	Evidence-Based (Moderate)	<p>CDC Community Health Improvement Navigator: http://www.cdc.gov/CHIdatabase/it-ems/diabetes-educators-provide-counseling-atworksitesleading-to-enhanced-knowledge-improved-outcomes-and-reduced-absenteeism</p>
Dental Health	<p>Preventing Dental Caries: School-Based Dental Sealant Delivery Programs</p> <p>The Community Preventive Services Task Force recommends school-based sealant delivery programs based on strong evidence of effectiveness in preventing dental caries (tooth decay) among children. This recommendation is based on evidence that shows these programs increase the number of children who receive sealants at school, and that dental sealants result in a large reduction in tooth decay among school-aged children (5 to 16 years of age).</p>	Evidence-Based	<p>The Community Guide: http://www.thecommunityguide.org/oral/schoolsealants.html</p>
Dental Health	<p>Preventing Dental Caries: Community Water Fluoridation</p> <p>The Community Preventive Services Task Force recommends community water fluoridation based on strong evidence of effectiveness in reducing dental caries across populations. Evidence shows the prevalence of caries is substantially lower in communities with CWF. In addition, there is no evidence that CWF results in severe dental fluorosis.</p>	Systematic Review	<p>The Community Guide: http://www.thecommunityguide.org/oral/fluoridation.html</p>

Issue	Practice or Intervention	Effectiveness	Source
Distracted Driving	<p>Evidence-Based Strategies/Interventions Review for Distracted Driving</p> <p>Literature review of peer-reviewed journals, government resources, injury prevention organizations and private corporations' publications. Focus is limited to interventions to reduce distracted driving.</p>	Systematic Review	<p>Texas Governor's EMS and Trauma Advisory Council, Injury Prevention Committee:</p> <p>https://www.dshs.texas.gov/emstrausystems/GETAC/PDF/IP-DistractedDriving.pdf</p>
Infant Mortality and Maternal Child Health	<p>Psychosocial Interventions for Supporting Women to Stop Smoking in Pregnancy</p> <p>Smoking while pregnant increases the risk of complications during pregnancy and of the baby having a low birth weight. This systematic review aimed to assess the effectiveness of the various psychosocial interventions to support pregnant women to stop smoking. It identified 102 trials and assessed the effectiveness of the following types of interventions: counseling, health education, incentives, social support, structured support for physical activity, and feedback. Feedback interventions give pregnant women information about the health of their fetuses and the levels of tobacco byproducts in their bodies. Counseling, feedback, and financial incentives appear to reduce the number of women smoking in late pregnancy.</p>	Systematic Review	<p>Cochrane Library of Systematic Reviews:</p> <p>https://www.cochranelibrary.com/cdsr/doi/10.1002/14651858.CD001055.pub5/full</p>
Infant Mortality and Maternal Child Health	<p>Alcohol – Excessive Consumption: Electronic Screening and Brief Interventions (e-SBI)</p> <p>e-SBI to reduce excessive alcohol consumption uses electronic devices (e.g., computers, telephones, or mobile devices) to facilitate the delivery of key elements of traditional screening and brief intervention. With traditional screening and brief intervention (SBI), providers assess patients' drinking patterns and offer those who screen positive for excessive drinking with a brief, face-to-face intervention that includes feedback about associated risks, changing drinking patterns, and referral to treatment if appropriate. At a minimum, e-SBI involves screening individuals for excessive drinking, and delivering a brief intervention, which provides personalized feedback about the risks and consequences of excessive drinking.</p>	Systematic Review	<p>The Community Guide:</p> <p>https://www.thecommunityguide.org/findings/alcohol-excessive-consumption-electronic-screening-and-brief-interventions-e-sbi</p>
Mental Health	<p>Collaborative care for the management of depressive disorders is a multicomponent, healthcare system-level intervention that uses case managers to link primary care providers, patients, and mental health specialists. These mental health specialists provide clinical advice and decision support to primary care providers and case managers. These processes are frequently coordinated by technology-based resources such as electronic medical records, telephone contact, and provider reminder mechanisms.</p>	Systematic Review	<p>Healthy People 2020:</p> <p>https://www.healthypeople.gov/2020/tools-resources/evidence-based-resource/mental-health-and-mental-illness-collaborative-care-management-depressive-disorders</p>

Issue	Practice or Intervention	Effectiveness	Source
Mental Health	Interventions to Reduce Depression Among Older Adults: Home-Based Depression Care Management - Depression care management at home for older adults with depression is recommended on the basis of strong evidence of effectiveness in improving short-term depression outcomes. Home-based depression care management involves active screening for depression, measurement-based outcomes, trained depression care managers, case management, patient education, and a supervising psychiatrist.	Systematic Review	Healthy People 2020: https://www.healthypeople.gov/2020/tools-resources/evidence-based-resource/mental-health-and-mental-illness-interventions-reduce-depression-among-older-adults-home
Mental Health	School-Based Programs to Reduce Violence Universal school-based programs to reduce violence are designed to teach all students in a given school or grade about the problem of violence and its prevention or about one or more of the following topics or skills intended to reduce aggressive or violent behavior: emotional self-awareness, emotional control, self-esteem, positive social skills, social problem solving, conflict resolution, or team work. In this review, violence refers to both victimization and perpetration.	Systematic Review	The Community Guide: https://www.thecommunityguide.org/findings/violence-school-based-programs
Nutrition	Mind, Exercise, Nutrition...Do it! (MEND) Program The goal of MEND is to reduce global obesity levels by offering free healthy living programs through communities and allowing families to learn about weight management. The MEND program focuses on educating children at an early age about healthy living and providing parents with solutions on how to promote good habits at home.	Evidence-Based	CDC Community Health Improvement Navigator: http://www.cdc.gov/CHIdatabase/it-ems/mind-exercise-nutritiondo-it-mend-program
Nutrition	Video Game Play This program utilized two videogames called "Escape from Diab" (Diab) and "Nanoswarm: Invasion from Inner Space" (Nano) to promote healthier behavior changes to reduce adverse health effects such as obesity and cardiovascular diseases among youth aged 10-12.	Evidence-Based	Healthy Communities Institute: http://cdc.thehcn.net/index.php?controller=index&module=PromisePractice&action=view&pid=3826
Nutrition	Community Coalition Supports Schools in Helping Students Increase Physical Activity and Make Better Food Choices HEALTHY (Healthy Eating Active Lifestyles Together Helping Youth) Armstrong, a community-based coalition in rural Armstrong County, PA, adopted elements of the national We Can! Ways to Enhance Children's Activity & Nutrition) program to help children improve their nutritional habits and get more physical activity. The coalition sponsors local marketing that promotes healthy behaviors, assists Armstrong School District elementary schools in providing students and parents with opportunities to learn about and engage in healthy behaviors, and hosts various community events that do the same. 	<p>Nutrition and Physical Activity Habits of Preschoolers</p> <p>Over a 2-year period, the Wayne County Health Department, the Partnership for Children of Wayne County, and the Goldsboro Parks and Recreation Department worked with several nonprofit groups to promote better nutrition and increased physical activity among preschoolers who attend eight local childcare centers. Key program components included refurbishing a local park and offering group events there, training childcare center staff on healthy eating and exercise, and planting gardens at each center.</p>		<p>http://wwwn.cdc.gov/CHIdatabase/items/county-city-and-community-agencies-support-childcare-centers-and-parents-in-improving-nutrition-and-physical-activity-habits-of</p>
Nutrition	<p>A community intervention reduces BMI z-score in children: Shape Up Somerville first year results</p> <p>The objective was to test the hypothesis that a community-based environmental change intervention could prevent weight gain in young children (7.6 +/- 1.0 years). A non-randomized controlled trial was conducted in three culturally diverse urban cities in Massachusetts. Somerville was the intervention community; two socio-demographically-matched cities were control communities. Children (n = 1178) in grades 1 to 3 attending public elementary schools participated in an intervention designed to bring the energy equation into balance by increasing physical activity options and availability of healthful foods within the before-, during-, after-school, home, and community environments. Many groups and individuals within the community (including children, parents, teachers, school food service providers, city departments, policy makers, healthcare providers, before- and after-school programs, restaurants, and the media) were engaged in the intervention.</p>	Evidence-Based	<p>CDC Community Health Improvement Navigator:</p> <p>http://wwwn.cdc.gov/CHIdatabase/items/a-community-intervention-reduces-bmi-z-score-in-children-shape-up-somerville-first-year-results</p>
Obesity	<p>Statewide Collaborative Combines Social Marketing and Sector-Specific Support to Produce Positive Behavior Changes, Halt Increase in Childhood Obesity</p>	Evidence-Based (Moderate)	<p>CDC Community Health Improvement Navigator:</p> <p>http://wwwn.cdc.gov/CHIdatabase/items/statewide-collaborative-combines-social-marketing-and-sector-specific-support-to-produce-positive-behavior-changes-halt-increase</p>

Obesity	Healthy Eating Lifestyle Program (HELP)	Effective Practice	Healthy Communities Institute:

Issue	Practice or Intervention	Effectiveness	Source
	<p>Healthy Eating Lifestyle Program's (HELP) main goal was to help overweight children aged 5-12 years and their families adopt healthier eating habits and increase physical activity. The program intervened with children before they reach adolescence and focused on long-term lifestyle changes in order to prevent the most long-term morbidity</p>		<p>http://cdc.thehcn.net/index.php?controller=index&module=PromisePractice&action=view&pid=3542</p>
Obesity	<p>Pounds Off Digitally (POD) Pounds Off Digitally offers weight loss intervention via a podcast (audio files for a portable music player or computer) has the advantage of being user controlled, easily accessible to those with the internet, and mobile. Over the course of 12 weeks overweight adults receive 24 episodes of a weight loss podcast based on social cognitive theory.</p>	Effective Practice	<p>Healthy Communities Institute: http://cdc.thehcn.net/index.php?controller=index&module=PromisePractice&action=view&pid=3209</p>
Obesity	<p>Obesity Prevention and Control: Worksite Programs Worksite nutrition and physical activity programs are designed to improve health-related behaviors and health outcomes. These programs can include one or more approaches to support behavioral change including informational and educational, behavioral and social, and policy and environmental strategies.</p>	Systematic Review	<p>The Community Guide: http://www.thecommunityguide.org/obesity/workprograms.html</p>
Obesity	<p>Obesity Prevention and Control: Behavioral Interventions to Reduce Screen Time Behavioral interventions aimed at reducing screen time are recommended for obesity prevention and control based on sufficient evidence of effectiveness for reducing measured screen time and improving weight-related outcomes. Screen time was reduced by 36.6 min/day (range: -26.4 min/day to -55.5 min/day) and a modest improvement in weight-related outcomes was observed when compared to controls. Most of the interventions evaluated were directed at children and adolescents. Behavioral interventions to reduce screen time (time spent watching TV, videotapes, or DVDs; playing video or computer games; and surfing the internet) can be single-component or multicomponent and often focus on changing screen time through classes aimed at improving children's or parents' knowledge, attitudes, or skills.</p>	Systematic Review	<p>The Community Guide: https://www.thecommunityguide.org/findings/obesity-behavioral-interventions-aim-reduce-recreational-sedentary-screen-time-among</p>
Physical Activity	<p>Community Coalition Supports Schools in Helping Students Increase Physical Activity and Make Better Food Choices HEALTHY (Healthy Eating Active Lifestyles Together Helping Youth) Armstrong, a community-based coalition in rural Armstrong County, PA, adopted elements of the national We Can! Ways to Enhance Children's Activity & Nutrition) program to help children improve their nutritional habits and get more physical activity. The coalition sponsors local marketing that</p>	Evidence-Based (Moderate)	<p>CDC Community Health Improvement Navigator: http://wwwn.cdc.gov/CHIdatabase/itcms/community-coalition-supports-schools-in-helping-students-increase-physical-activity-and-make-better-food-choices</p>

Physical Activity	<p>Built Environment Approaches Combining Transportation System Interventions with Land Use and Environmental Design</p> <p>Built environment interventions to increase physical activity create or modify environmental characteristics in a community to make physical activity easier or more accessible. Coordinated approaches must combine new or enhanced elements of transportation systems with new or enhanced land use and environmental design features. Intervention approaches must be designed to enhance opportunities for active transportation, leisure-time physical activity, or both.</p> <p>Transportation system interventions include one or more policies and projects designed to increase or improve the following: Street connectivity, Sidewalk and trail infrastructure, Bicycle infrastructure, Public transit infrastructure and access.</p> <p>Land use and environmental design interventions include one or more policies, designs, or projects to create or enhance the following:</p> <ul style="list-style-type: none"> • Mixed land use environments to increase the diversity and proximity of local destinations where people live, work, and spend their recreation and leisure time • Access to parks, and other public or private recreational facilities 	Systematic Review	<p>Healthy People 2020: https://www.thecommunityguide.org/findings/physical-activity-built-environment-approaches</p>
Physical Activity	<p>Activity Bursts in the Classroom (ABC) Fitness Program</p> <p>Activity Bursts in the Classroom (ABC) Fitness Program is a classroom-based physical activity program for elementary school children. The program combines brief bursts of classroom-</p>	Evidence-Based	<p>Healthy Communities Institute: http://cdc.thehcn.net/index.php?module=promisepractice&controller=index&action=view&pid=3616</p>

Issue	Practice or Intervention	Effectiveness	Source
	<p>based activity with parental education and community involvement. Bursts of classroom activity aim to replace time spent by teachers calming down classrooms and improving concentration among students. Bursts of activity are conducted during downtime in the classroom, with a goal of 30 minutes of activity a day. Each activity burst has three components: warm up, core activity, and cool down. Warm up includes stretching or light aerobic activity, the core activity includes strength or aerobic activity, and the cool down consists of stretching or low-intensity activity. Teachers are given freedom to choose the activities appropriate for their classroom.</p>		
Physical Activity	<p>Behavioral and Social Approaches to Increase Physical Activity: Enhanced School-Based Physical Education</p> <p>Enhanced school-based physical education (PE) involves curricular and practice-based changes that increase the amount of time that K-12 students engage in moderate- or vigorous-intensity physical activity during PE classes. Strategies include the following:</p> <ul style="list-style-type: none"> •Instructional strategies and lessons that increase physical activity (e.g., modifying rules of games, substituting more active games for less active ones) •Physical education lesson plans that incorporate fitness and circuit training activities 	Systematic Review	<p>The Community Guide: http://www.thecommunityguide.org/pa/behavioral-social/schoolbased-pe.html</p>
Poverty	<p>Policies to Address Poverty in America: Collective evidence on successful interventions that are designed to address specific aspects of poverty. The included proposals are put forward with the goal of making economic prosperity a more broadly shared promise for all who live in the United States.</p>	Evidence-Based	<p>The Hamilton Project: http://www.hamiltonproject.org/papers/filter/economic_security_poverty/policy_proposals/all_years</p>

Appendix

This Appendix includes the following sections:

- Steering Committee Members
- Forces of Change Materials
- Survey Materials: Community Survey and Provider/Partner Survey

STEERING COMMITTEE MEMBERS

- Marla Banta, Private Citizen
- Samantha Beckham, United Way of Hernando County
- Jim Blaisdell, Florida Department of Health in Hernando County
- Jennifer Blish, Hernando Community Coalition
- Angie Bonfardino-Walasek, United Way of Hernando County
- Doug Brainard, People Helping People
- Sue Carrigan, Hernando Community Coalition
- Virginia Crandall, Florida Department of Health in Hernando County
- Stefica Depovic, Florida Department of Health in Hernando County
- Gina Dowler, Florida Department of Health in Hernando County
- Ann-Gayl Ellis, Florida Department of Health in Hernando County
- Judy Everett, Hernando County School District
- Jennifer Fletcher, PACE Center for Girls
- Gina Gonzalez, Baycare Behavioral Health
- Kelly Gormerly, Parent Academy, Hernando County Sheriff's Office
- Naomi Green, Going Vegan for Health
- Gus Guadagnino, Veteran's Heat Factory
- Dory Headlee, Revitalize Counseling Center
- Lesley Hersey, LSF Health Systems
- Harold Hutchinson, Jr., Hernando Community Coalition
- Xonjenese Jacobs, PACE Center for Girls
- Lauren Jolly, Spherion Staffing
- Tina Kinney, National Alliance on Mental Illness (NAMI) Hernando
- Kasey Kupcik, Hernando County Government
- Lt. Phil Lakin, Hernando County Sheriff's Office
- Richard Linkul, Premier Marketing
- Martha Maner, Mid-Florida Community Services
- Sandra Marrero, Baycare Behavioral Health
- Nina Mattei, Florida Department of Health in Hernando County
- Tim Miller, Florida Department of Health in Hernando County
- Christy Murray, Hernando County Community Alliance
- Robin Napier, Florida Department of Health in Hernando County
- Barbara Nassar, People Helping People
- Alba Pagan, Bayfront Health
- Zuliet Perez, Dawn Center
- Nancy Philips, Melaleuca The Wellness Company
- Saundra Piercy, End of Life Doula
- Cheryl Pollock, Premier Community HealthCare
- Gina Prespare, Crescent Community Clinic
- Holden Reigel, YMCA
- Teresa Robinson, WellCome Om Center
- Anita Sanchez, Florida Department of Health in Hernando County

Steering Committee Members (continued)

- Derek Saunier, St. Leo University
- Jennifer Siem, Bayfront Health
- Amber Slusser, YMCA
- Evan Sommerfeld, People Helping People
- Lisa Studzin, Dawn Center
- Ashley Thomas, Florida Department of Health in Hernando County
- Noel Tullis, United Way of Hernando County
- Mike Walker, City of Brooksville
- Tresa Watson, Hernando Community Coalition
- Eddie Williams, Pasco-Hernando State College
- Carolyn Zirkovic, BEMER Microcirculation Center

FORCES OF CHANGE MATERIALS

Forces of Change Brainstorming Worksheet

The following worksheet is designed for the Hernando County CHA Steering Committee and invited guests for the Forces of Change brainstorming session. In small groups or individually, please complete this Forces of Change Brainstorming Worksheet in preparation for the discussion that will follow.

What are Forces of Change?

Forces are a broad all-encompassing category that includes trends, events, and factors.

- **Trends are patterns over time**, such as migration in and out of a community or a growing disillusionment with government.
- **Factors are discrete elements**, such as a community's large ethnic population, an urban setting, or a jurisdiction's proximity to a major waterway.
- **Events are one-time occurrences**, such as a hospital closure, a natural disaster, or the passage of new legislation.

What Kind of Areas or Categories Are Included?

Be sure to consider any and all types of forces, including:

- social
- economic
- political
- technological
- environmental
- scientific
- legal
- ethical

How To Identify Forces of Change

Think about forces of change - outside of Hernando County's direct control - that affect the local health care system, local health outcomes or overall community health; forces that may hinder or enhance Hernando County's ability to improve community health outcomes.

1. What has occurred recently that may affect our local public health system or community?
2. What may occur in the future?
3. Are there any trends occurring that will have an impact? Describe the trends.
4. What forces are occurring locally? Regionally? Nationally? Globally?
5. What characteristics of our jurisdiction or state may pose an opportunity or threat?
6. What may occur or has occurred that may pose a barrier to achieving the shared vision?

Forces of Change Brainstorming Worksheet

Using the information from the previous page, brainstorm a list of the Forces of Change that you believe will be the most important **within the next three (3) years**, including **factors**, **events**, and **trends** (see definitions of these terms on previous page). Continue onto another page if needed.

Worksheet Example: Factors, events and trends affecting Hernando County:

Example 1: Stagnant economy

Example 2: Changes to Affordable Care Act

Example 3: Rise in opioid use and other substance abuse issues

Factors, events and trends affecting Hernando County:

1. _____
2. _____
3. _____
4. _____
5. _____
6. _____
7. _____
8. _____
9. _____
10. _____
11. _____
12. _____
13. _____
14. _____

If you have any questions, please do not hesitate to contact Chris Abarca at 352-727-3767 or cabarca@wellflorida.org

SURVEY MATERIALS

COMMUNITY MEMBER SURVEY

2019 Hernando County Community Health Survey

Dear Neighbor,

What are the most important health and health care issues in your community? The Florida Department of Health in Hernando County, in partnership with WellFlorida Council, the local health planning council, invite you to answer this Community Health Needs Assessment survey. The survey will be available from Monday, March 18 through Sunday, May 26, 2019. Community leaders will use your answers to build a healthier community.

This survey has 42 questions and should take about 10-15 minutes to finish. Your answers will not be used to identify you.

We are holding a raffle to give away ten (10) gift cards worth \$30 each. To enter the raffle:

- You must be at least 18 years old to participate.
- Answer all questions on the survey.
- Give us your phone number and/or email address so that we can reach you if you are a winner. Your phone number and/or email address will remain confidential.

Please answer the survey only once. Completing more than one survey will not increase your chances to win a gift card.

If you have any questions about this survey or the survey process, you may contact Christine Abarca at WellFlorida Council (www.wellflorida.org). The phone number is 352-727-3767 and her e-mail address is cabarca@wellflorida.org.

The survey begins on the following page.

Thank you for sharing your views about health with us!

YOU MUST BE AT LEAST 18 YEARS OF AGE AND A RESIDENT OF HERNANDO COUNTY TO PARTICIPATE IN THIS SURVEY.

1. What is your age?

- Yes, I am 18 years of age or older
- No, I am 17 years of age or younger. *Sorry! You are not eligible to take this survey. Thank you for your interest in improving health in Hernando County.*

2. Where do you live? Choose ONE

- I live in Hernando County
- I am a seasonal resident of Hernando County
- I do not live in Hernando County. *Sorry! You are not eligible to take this survey. Thank you for your interest in improving health in Hernando County.*

3. What is your zip code?

- 34601
- 34602
- 34604
- 34606
- 34607
- Other, please specify _____
- 34608
- 34609
- 34613
- 34614
- 34661

4. What do you think contributes most to a healthy community? Choose THREE

- Access to affordable health care including primary/family care and specialty care, dental care and mental health care
- Access to convenient, affordable and nutritious foods
- Affordable goods/services
- Affordable housing
- Affordable utilities
- Arts and cultural events
- Awareness of health care and social services
- Clean environment
- First responders, Fire/Rescue/EMS, emergency preparedness
- Good place to raise children
- Job opportunities for all levels of education
- Low crime/safe neighborhoods
- Low level of child abuse
- Low level of domestic violence
- Low preventable death and disease rates
- Low rates of infant and childhood deaths
- Parks and recreation
- Places of worship
- Public transportation system
- Religious or spiritual values

- Good race/ethnic relations
- Good schools
- Healthy behaviors
- Strong economy
- Strong family ties
- Other, please specify _____

5. What has the greatest negative impact on the health of people in Hernando County? Choose THREE

- Alcohol abuse
- Distracted driving (e.g., texting while driving)
- Dropping out of school
- Drug abuse (cocaine, methamphetamines, opioids, ecstasy, heroin, LSD, bath salts, etc.)
- Eating unhealthy foods/drinking sugar sweetened beverages
- Lack of personal responsibility
- Lack of sleep
- Lack of stress management
- Lack of physical activity
- Loneliness or isolation
- Not getting immunizations to prevent disease (e.g., flu shots)
- Not using birth control
- Not using health care services appropriately
- Not using seat belts/child safety seats
- Overeating
- Racial/ethnic relations
- Starting prenatal care late in pregnancy
- Tobacco use/vaping/chewing tobacco
- Unsafe sex
- Unsecured firearms
- Violence
- Other, please specify _____

6. Which health care services are difficult for you to obtain in Hernando County? Choose ALL that apply

- | | | |
|---|---|---|
| <input type="radio"/> Alternative medicine/therapy (e.g., acupuncture, naturopathy consult) | <input type="radio"/> Prescriptions/medications or medical supplies | <input type="radio"/> Laboratory services |
| <input type="radio"/> Dental/oral care | <input type="radio"/> Preventive care (e.g., check-ups) | <input type="radio"/> Mental/behavioral health |

| <input type="radio"/> Heart disease and stroke | <input type="radio"/> Vaccine preventable diseases (e.g., flu, measles) |
| <input type="radio"/> High blood pressure | |
| <input type="radio"/> HIV/AIDS | <input type="radio"/> Other, please specify _____ |

8. During the past 12 months, was there a time you needed dental care, including check-ups, but didn't get it?

- Yes. Please go to Question 9.
- No. I got the dental care I needed or didn't need dental care. Please go to Question 10.

9. What were the reasons you could not get the dental care you needed during the past 12 months? Choose ALL that apply

- Cost
- No appointments available or long waits for appointments
- No dentists available
- Service not covered by insurance or have no insurance
- Transportation, couldn't get there
- Work-related issue (e.g., work schedule conflict, no paid leave, denied time off)
- My responsibilities as a caregiver for another person (child or adult) kept me from getting the care I needed for myself
- Other, please specify _____

10. During the past 12 months, was there a time when you needed to see a primary care/family care doctor for health care but couldn't get it?

- Yes. Please go to Question 11.
- No. I got the health care I needed or didn't need care. Please go to Question 12.

11. What were the reasons you could not get the primary/family care you needed during the past 12 months? Choose ALL that apply

- Cost
- No appointments available or long waits for appointments
- No primary care providers (doctors, nurses) available
- Service not covered by insurance or have no insurance
- Transportation, couldn't get there
- Work-related issue (e.g., work schedule conflict, no paid leave, denied time off)
- My responsibilities as a caregiver for another person (child or adult) kept me from getting the care I needed for myself
- Other, please specify _____

12. During the past 12 months, was there a time when you needed to see a therapist or counselor for a mental health or substance use issue, but didn't?

- Yes. Please go to Question 13.
- No. I did not need to see a therapist or counselor for a mental health or substance use issue or I got the care I needed. Please go to Question 14.

13. What prevented you from seeing a therapist or counselor for a mental health or substance use issue? Choose ALL that apply

- Cost
- No appointments available or long waits for appointments
- No mental health care providers or no substance use therapists or counselors available
- Service not covered by insurance or have no insurance
- Transportation, couldn't get there
- Work-related issue (e.g., work schedule conflict, no paid leave, denied time off)
- My responsibilities as a caregiver for another person (child or adult) kept me from getting the care I needed for myself
- Other, please specify _____

14. Are you responsible for getting health, dental and/or mental health care for a child or children under the age of 18?

- No. Please go to Question 21.
- Yes. Please go Question 15.

15. During the past 12 months, was there a time when your child or children in your care needed dental care, including check-ups, but didn't get it?

- Yes. Please go to Question 16.
- No. My child or children got the dental care they needed or didn't need dental care. Please go to Question 17.

16. What prevented your child or children in your care from getting the dental care they needed during the past 12 months? Choose ALL that apply

- Cost
- No appointments available or long waits for appointments
- No dentists available
- Service not covered by insurance or no insurance
- Transportation, couldn't get there
- Other, please specify _____

17. During the past 12 months, was there a time when your child or children in your care needed to see a primary/family care doctor for health care but couldn't?

- Yes. Please go to Question 18.
- No. My child or children got the health care they needed or didn't need care. Please go to Question 19.

18. What prevented your child or children in your care from getting the primary/family care they needed during the past 12 months? Choose ALL that apply

- Cost
- No appointments available or long waits for appointments
- No primary care providers (doctors, nurses) available
- Service not covered by insurance or have no insurance
- Transportation, couldn't get there
- Other, please specify _____

19. During the past 12 months, was there a time when your child or children in your care needed to see a therapist or counselor for a mental health or substance use issue, but didn't?

- Yes. Please go to Question 20.
- No. My child or children got to see a therapist or counselor when they needed mental health/substance use care or they didn't need mental health/substance use care. Please go to Question 21.

20. What prevented your child or children in your care from seeing a therapist or counselor for a mental health or substance use issue? Choose ALL that apply

- Cost
- No appointments available or long waits for appointments
- No mental health care providers or substance use therapists or counselors available
- Service not covered by insurance or have no insurance
- Transportation, couldn't get there
- Other, please specify _____

21. Are you responsible for getting health, dental and/or mental health care for an adult in your care?

- No. Please go to Question 28.
- Yes. Please go Question 22.

22. During the past 12 months, was there a time when an adult in your care needed dental care, including check-ups, but didn't get it?

- Yes. Please go to Question 23.
- No. The adult in my care got the dental care they needed or didn't need care. Please go to Question 24.

23. What prevented the adult in your care from getting the dental care they needed during the past 12 months? Choose **ALL that apply.**

- Cost
- No appointments available or long waits for appointments

Do you want to participate in our raffle to win a \$30 gift card? If you do, write in your email address or phone number so we can contact you if you win.

Email address: _____

Phone number: _____

Please return your completed survey to the agency/organization that provided it to you. You may also return the survey to:

- Florida Department of Health in Hernando County, 7551 Forest Oaks Blvd., Spring Hill, FL 34606
- Florida Department of Health in Hernando County, 300 South Main Street, Brooksville, FL 34601

Thank you for taking the time to complete the survey. Your input is important and will help inform improvements to health and health care in Hernando County.

PROVIDER SURVEY

2019 Hernando County Healthcare Provider and Partner Survey

Dear Health Care/Social Service Provider and Community Partner,

The Florida Department of Health in Hernando County, in partnership with WellFlorida Council, the local health planning council for North Central Florida, are sponsoring a comprehensive Community Health Needs Assessment to be completed by September 30, 2019. We request your input as a health care/social service provider and/or community partner, on the most pressing health and health care issues facing our community now and beyond 2019. Your responses will inform community health improvement planning and assist efforts to build a healthier community. Your individual responses to this survey will remain confidential. This survey consists of 11 questions and some demographic items. It should take no more than 10 minutes to complete.

This survey is being distributed throughout Hernando County. The survey will be available from Monday, March 18, 2019 through Friday, June 14, 2019.

Thanks so very much for your willingness to help the community by completing this survey! If you have any questions about this survey or the survey process, you may contact Christine Abarca of WellFlorida Council, who is coordinating the needs assessment on our behalf, at cabarca@wellflorida.org or 352-727-3767.
